

**Recommendations of the Undergraduate Board of Studies (BOS) in Physics in connection with the Choice Based Credit System (CBCS):**

1. There are twenty (20) elective papers suggested in the UGC guideline. Even though all of them have been included in the draft syllabus, each college may offer at least six (06) of them at present depending on the faculty available, while the number of elective papers to be taken by a student is four (04). The BOS has identified some such elective papers that under present circumstances can be offered. However, as and when necessary arrangements are made, the college should try to offer as many elective papers as possible.
2. If a college offers a B.Sc. Honours course in Physics, the minimum number of full-time permanent teachers in the department should be six (06).
3. Practical examinations for all semesters should be conducted at the respective colleges. There shall however be at least one external examiner in each practical examination of B.Sc. Honours in Physics. In case no external examiner is available, the Controller of Examinations in consultation with the Chairman, Board of Studies, will take an appropriate decision. In the General B.Sc. Course the practical examinations may be conducted by the internal examiners only.
4. The university is requested to organize a teachers' training program to make the teachers aware about the CBCS in general, and to train the teachers on newly introduced practical courses based on computer programming in particular.
5. In order to cater to the requirements of both B.Sc. Honours and General Physics courses, all colleges should have good computer laboratories with internet connectivity. It is recommended that at a time one computer should not preferably be used by more than two students.
6. In order to establish Physics laboratories as per the requirements of the new CBCS syllabus, each college should arrange a fund of at least one crore INR.

	Discipline Specific Elective–3	TBD	4
	Discipline Specific Elective– 3 Practical	TBD	2
	Discipline Specific Elective–4	TBD	4
	Discipline Specific Elective– 4 Practical	TBD	2
<b>Total Credits</b>			140

1 credit= 1 hr/week for theory; 2 hrs/week for practical

### 1.3 Choices for Discipline Specific Electives

Discipline Specific Elective–1 to 4			
Advanced Mathematical Physics I	Nuclear and Particle Physics	Astrophysics and Astronomy	Classical Dynamics
Advanced Mathematical Physics II	Nano-materials and Applications	Physics of Devices & Communication	

### 1.4 Choices for Skill Enhancement Courses

Skill Enhancement Course-1 & Skill Enhancement Course-2			
Renewable Energy & Energy harvesting	Electrical circuits & Network	Weather Forecasting	Computational Physics
Basic Instrumentation skills			

### 1.5 General Electives

Skill Enhancement Course-1 & Skill Enhancement Course-2				
Mechanics	Electricity and Magnetism	Thermal Physics and Statistical Mechanics	Waves and Optics	Digital, Analog Circuits and Instrumentation
Elements of Modern Physics	Solid State Physics	Quantum Mechanics	Nuclear and Particle Physics	

## 1.6 Mode of Practical Examination

**Centre:** Concerned College

**Convener:** The convener for each practical paper is to be nominated by the UG BoS.

**Examiners:** One internal examiner of the concerned college and one external examiner are to be nominated by the UG BoS. However, if any nominated external examiner does not accept the offer due to unavoidable circumstances to be substantiated by the document through proper channel, the Chairman of the UG BoS can nominate the external examiner with the consultation of the Convener.

## 2. Core Subjects Syllabus

### 2.1 Core T<sub>1</sub> – Mathematical Physics

Mathematical Physics	
	<b>4 Credits</b>
<b>Calculus</b>	
<p>Recapitulation: Limits, continuity, average and instantaneous quantities, differentiation. Plotting functions. Intuitive ideas of continuous, differentiable, etc. functions and plotting of curves. Approximation: Taylor and binomial series (statements only).</p> <p>First Order and Second Order Differential equations: First Order Differential Equations and Integrating Factor. Homogeneous Equations with constant coefficients. Wronskian and general solution. Statement of existence and Uniqueness Theorem for Initial Value Problems. Particular Integral.</p> <p>Calculus of functions of more than one variable: Partial derivatives, exact and inexact differentials. Integrating factor, with simple illustration. Constrained Maximization using Lagrange Multipliers.</p>	
<b>Vector Calculus</b>	
<p>Recapitulation of vectors: Properties of vectors under rotations. Scalar product and its invariance under rotations. Vector product, Scalar triple product and their interpretation in terms of area and volume respectively. Scalar and Vector fields.</p> <p>Vector Differentiation: Directional derivatives and normal derivative. Gradient of a scalar field and its geometrical interpretation. Divergence and curl of a vector field. Del and Laplacian operators. Vector identities.</p>	

Vector Integration: Ordinary Integrals of Vectors. Multiple integrals, Jacobian. Notion of infinitesimal line, surface and volume elements. Line, surface and volume integrals of Vector fields. Flux of a vector field. Gauss' divergence theorem, Green's and Stokes Theorems and their applications (no rigorous proofs).

### Orthogonal Curvilinear Coordinates

Orthogonal Curvilinear Coordinates. Derivation of Gradient, Divergence, Curl and Laplacian in Cartesian, Spherical and Cylindrical Coordinate Systems.

### Introduction to probability

Independent random variables: Probability distribution functions; binomial, Gaussian, and Poisson, with examples. Mean and variance.

Dependent events: Conditional Probability. Bayes' Theorem and the idea of hypothesis testing.

### Dirac Delta function and its properties

Definition of Dirac delta function. Representation as limit of a Gaussian function and rectangular function. Properties of Dirac delta function.

### Reference Books

- ▶ Mathematical Methods for Physicists, G.B. Arfken, H.J. Weber, F.E. Harris, 2013, 7th Edn., Elsevier.
- ▶ An introduction to ordinary differential equations, E.A. Coddington, 2009, PHI learning
- ▶ Differential Equations, George F. Simmons, 2007, McGraw Hill.
- ▶ Mathematical Tools for Physics, James Nearing, 2010, Dover Publications.
- ▶ Mathematical methods for Scientists and Engineers, D.A. McQuarrie, 2003, Viva Book
- ▶ Advanced Engineering Mathematics, D.G. Zill and W.S. Wright, 5 Ed., 2012, Jones and Bartlett Learning
- ▶ Mathematical Physics, Goswami, 1st edition, Cengage Learning
- ▶ Engineering Mathematics, S.Pal and S.C. Bhunia, 2015, Oxford University Press
- ▶ Advanced Engineering Mathematics, Erwin Kreyszig, 2008, Wiley India.
- ▶ Essential Mathematical Methods, K.F.Riley & M.P.Hobson, 2011, Cambridge Univ. Press
- ▶ Mathematical methods in the Physical Sciences, M. L. Boas, 2005, Wiley.

## 2.2 Core P1 – Mathematical Physics Lab

### Mathematical Physics

**2 credits**

### Introduction and Overview

Computer architecture and organization, memory and Input/output devices

### Basics of scientific computing

Binary and decimal arithmetic, Floating point numbers, algorithms, Sequence, Selection and Repetition, single and double precision arithmetic, underflow & overflow- emphasize the importance of making equations in terms of dimensionless variables, Iterative methods

### Errors and error Analysis

Truncation and round off errors, Absolute and relative errors, Floating point computations.

### Introduction to plotting graphs with Gnuplot

Basic 2D and 3D graph plotting - plotting functions and data files, fitting data using gnuplot's fit function, polar and parametric plots, modifying the appearance of graphs, Surface and contour plots, exporting plots.

### Introduction to programming in python:

Introduction to programming, constants, variables and data types, dynamical typing, operators and expressions, modules, I/O statements, iterables, compound statements, indentation in python, the if-elif-else block, for and while loops, nested compound statements, lists, tuples, dictionaries and strings, basic ideas of object oriented programming.

### Programs

Sum & average of a list of numbers, largest of a given list of numbers and its location in the list, sorting of numbers in ascending descending order, Binary search

### Random number generation

Area of circle, area of square, volume of sphere, value of pi ( $\pi$ )

### Solution of Algebraic and Transcendental equations by Bisection, Newton Raphson and Secant methods

Solution of linear and quadratic equation, solving  $\alpha = \tan \alpha; I - I_2 \left( \frac{\sin \alpha}{\alpha} \right)^2$ , in optics.

### Interpolation by Newton Gregory Forward and Backward difference formula, Error estimation of linear interpolation

Evaluation of trigonometric functions e.g.  $\sin \theta$ ,  $\cos \theta$ ,  $\tan \theta$ , etc.

### Numerical differentiation (Forward and Backward difference formula) and Integration (Trapezoidal and Simpson rules), Monte Carlo method

Given Position with equidistant time data to calculate velocity and acceleration and vice versa. Find the area of B-H Hysteresis loop

### Solution of Ordinary Differential Equations (ODE) First order Differential equation Euler, modified Euler and Runge-Kutta (RK) second and fourth order methods

First order differential equation

- ▶ Radioactive decay
- ▶ Current in RC, LC circuits with DC source
- ▶ Newton's law of cooling
- ▶ Classical equations of motion

Attempt following problems using RK 4 order method

Solve the coupled differential equations

$$\frac{dx}{dt} = y + x - \frac{x^3}{3}, \quad \frac{dy}{dx} = -x$$

For four initial conditions  $x(0) = 0$ ,  $y(0) = -1, -2, -3, -4$ .

Plot  $x$  vs  $y$  for each of the four initial conditions on the same screen for  $0 \leq t \leq 15$

The differential equation describing the motion of a pendulum is  $\frac{d^2\theta}{dt^2} = -\sin\theta$ . The pendulum is released from rest at an angular displacement  $\alpha$ , i. e.  $\theta(0) = \alpha$ , and  $\theta'(0) = 0$ . Solve the equation for  $\alpha = 0.1, 0.5$  and  $1.0$  and plot  $\theta$  as a function of time in the range  $0 \leq t \leq 8\pi$ . Also plot the analytic solution valid for small  $\theta$   $\sin\theta = \theta$ .

- ▶ Effective Computation in Physics- Field guide to research with Python, A. Scopatz and K.D. Huff, 2015, O'Rielly
- ▶ A first course in Numerical Methods, U.M. Ascher & C. Greif, 2012, PHI Learning.
- ▶ Elementary Numerical Analysis, K.E. Atkinson, 3 rd Edn . , 2007, Wiley India Edition.
- ▶ Numerical Methods for Scientists & Engineers, R.W. Hamming, 1973, Courier Dover Pub.

- ▶ An Introduction to computational Physics, T.Pang, 2nd Edn., 2006, Cambridge Univ. Press
- ▶ Computational Physics, Darren Walker, 1st Edn., 2015, Scientific International Pvt. Ltd.

## 2.3 Core T2 – Mechanics

Mechanics	
	<b>4 Credits</b>
<b>Fundamentals of Dynamics</b>	
Reference frames. Inertial frames; Review of Newton's Laws of Motion. Galilean transformations; Galilean invariance. Momentum of variable- mass system: motion of rocket. Motion of a projectile in Uniform gravitational field Dynamics of a system of particles. Centre of Mass. Principle of conservation of momentum. Impulse.	
<b>Work and Energy</b>	
Work and Kinetic Energy Theorem. Conservative and non- conservative forces. Potential Energy. Qualitative study of one dimensional motion from potential energy curves. Stable and unstable equilibrium. Elastic potential energy. Force as gradient of potential energy. Work & Potential energy. Work done by non-conservative forces. Law of conservation of Energy.	
<b>Collisions</b>	
Elastic and inelastic collisions between particles. Centre of Mass and Laboratory frames.	
<b>Rotational Dynamics</b>	
Angular momentum of a particle and system of particles. Torque. Principle of conservation of angular momentum. Rotation about a fixed axis. Moment of Inertia. Calculation of moment of inertia for rectangular, cylindrical and spherical bodies. Kinetic energy of rotation. Motion involving both translation and rotation.	
<b>Elasticity</b>	
Relation between Elastic constants. Twisting torque on a Cylinder or Wire.	
<b>Fluid Motion</b>	
Kinematics of Moving Fluids: Poiseuille's Equation for Flow of a Liquid through a Capillary Tube.	
<b>Gravitation and Central Force Motion</b>	
Law of gravitation. Gravitational potential energy. Inertial and gravitational mass. Potential and field due to	

spherical shell and solid sphere.

Motion of a particle under a central force field. Two-body problem and its reduction to one-body problem and its solution. The energy equation and energy diagram. Kepler's Laws. Satellite in circular orbit and applications. Geosynchronous orbits. Weightlessness. Basic idea of global positioning system (GPS).

### Oscillations

SHM: Simple Harmonic Oscillations. Differential equation of SHM and its solution. Kinetic energy, potential energy, total energy and their time-average values. Damped oscillation. Forced oscillations: Transient and steady states; Resonance, sharpness of resonance; power dissipation and Quality Factor.

### Non-Inertial Systems:

Non-inertial frames and fictitious forces. Uniformly rotating frame. Laws of Physics in rotating coordinate systems. Centrifugal force. Coriolis force and its applications. Components of Velocity and Acceleration in Cylindrical and Spherical Coordinate Systems.

### Special Theory of Relativity

Michelson-Morley Experiment and its outcome. Postulates of Special Theory of Relativity. Lorentz Transformations. Simultaneity and order of events. Lorentz contraction. Time dilation. Relativistic transformation of velocity, frequency and wave number. Relativistic addition of velocities. Variation of mass with velocity. Massless Particles. Mass-energy Equivalence. Relativistic Doppler effect. Relativistic Kinematics. Transformation of Energy and Momentum.

### Reference Books

- ▶ An introduction to mechanics, D. Kleppner, R.J. Kolenkow, 1973, McGraw-Hill.
- ▶ Mechanics, Berkeley Physics, vol.1, C.Kittel, W.Knight, et.al. 2007, Tata McGraw-Hill.
- ▶ Physics, Resnick, Halliday and Walker 8/e. 2008, Wiley.
- ▶ Analytical Mechanics, G.R. Fowles and G.L. Cassiday. 2005, Cengage Learning.

## 2.4 Core P2 – Mechanics Lab

Mechanics	
	<b>2 Credits</b>
<b>General Topic</b>	
Discussion on random errors in observations.	
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.</li> <li>2. To study the random error in observations.</li> <li>3. To determine the height of a building using a Sextant.</li> <li>4. To study the Motion of Spring and calculate, (a) Spring constant, (b) g and (c) Modulus of rigidity.</li> <li>5. To determine the Moment of Inertia of a Flywheel.</li> <li>6. To determine g and velocity for a freely falling body using Digital Timing Technique</li> <li>7. To determine Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).</li> <li>8. To determine the Young's Modulus of a Wire by Optical Lever Method.</li> <li>9. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.</li> <li>10. To determine the elastic Constants of a wire by Searle's method.</li> <li>11. To determine the value of g using Bar Pendulum.</li> <li>12. To determine the value of 'g' using Kater's Pendulum.</li> </ol> <p>Note: Some of these experiments may be too expensive to set up in all colleges. In particular, the digital timing technique is usually too costly, unless use is made of comparatively cheap solutions like the expeyes system developed by IUAC. It may be more feasible to leave the universities some freedom in choosing experiments that are similar in spirit, but more in keeping with equipment that may be already available in the labs.</p>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B. L. Flint and H.T. Worsnop, 1971, Asia Publishing House</li> <li>▶ Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers</li> <li>▶ A Text Book of Practical Physics, I.Prakash &amp; Ramakrishna, 11th Edn, 2011, Kitab Mahal</li> <li>▶ Engineering Practical Physics, S.Panigrahi &amp; B.Mallick, 2015, Cengage Learning India Pvt. Ltd.</li> <li>▶ Practical Physics, G.L. Squires, 2015, 4th Edition, Cambridge University Press.</li> </ul>	

## 2.5 Core T<sub>3</sub> - Electricity and Magnetism

Electricity and Magnetism	
	<b>4 Credits</b>
<b>Electric Field and Electric Potential</b>	
<p>Electric field: Electric field lines. Electric flux. Gauss' Law with applications to charge distributions with spherical, cylindrical and planar symmetry.</p> <p>Conservative nature of Electrostatic Field. Electrostatic Potential. Laplace's and Poisson equations. The Uniqueness Theorem. Potential and Electric Field of a dipole. Force and Torque on a dipole.</p> <p>Electrostatic energy of system of charges. Electrostatic energy of a charged sphere. Conductors in an electrostatic Field. Surface charge and force on a conductor. Capacitance of a system of charged conductors. Parallel-plate capacitor. Capacitance of an isolated conductor. Uniqueness theorem (statement). Method of Images and its application to: (1) Plane Infinite Sheet and (2) Sphere.</p>	
<b>Dielectric Properties of Matter</b>	
<p>Electric Field in matter. Polarization, Polarization Charges. Electrical Susceptibility and Dielectric Constant. Capacitor (parallel plate, spherical, cylindrical) filled with dielectric. Displacement vector <math>D</math>. Relations between <math>E</math>, <math>P</math> and <math>D</math>. Gauss' Law in dielectrics.</p>	
<b>Magnetic Field</b>	
<p>Magnetic force between current elements and definition of Magnetic Field <math>B</math>. Biot-Savart's Law and its simple applications: straight wire and circular loop. Current Loop as a Magnetic Dipole and its Dipole Moment (Analogy with Electric Dipole).</p> <p>Ampere's Circuital Law and its application to (1) infinite straight wire, (2) Infinite planar surface current, and (3) Solenoid. Properties of <math>B</math>: curl and divergence. Axial vector property of <math>B</math> and its consequences. Vector Potential. Magnetic Force on (1) point charge (2) current carrying wire (3) between current elements. Torque on a current loop in a uniform Magnetic Field.</p>	
<b>Magnetic Properties of Matter</b>	
<p>Magnetization vector (<math>M</math>). Magnetic Intensity (<math>H</math>). Magnetic Susceptibility and permeability. Relation between <math>B</math>, <math>H</math>, <math>M</math>. Ferromagnetism. <math>B</math>-<math>H</math> curve and hysteresis.</p>	
<b>Electromagnetic Induction</b>	

Faraday's Law. Lenz's Law. Self-Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field. Introduction to Maxwell's Equations. Charge Conservation and Displacement current

### **Electrical Circuits**

AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit

### **Network theorems**

Ideal Constant-voltage and Constant-current Sources. Network Theorems: Thevenin theorem, Norton theorem, Superposition theorem, Reciprocity theorem, Maximum Power Transfer theorem. Applications to dc circuits

Note: For the sake of brevity, details of ballistic galvanometer may be omitted from the theory course. Some part of the theory may be needed for the experiments, but this can be covered as part of Practical.

## 2.6 Core P<sub>3</sub> – Electricity and Magnetism Lab

Electricity and Magnetism	
	<b>2 Credits</b>
<p><b>General topic</b></p> <p>Use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current, (d) Capacitances, and (e) Checking electrical fuses.</p>	
<p><b>List of Practicals</b></p>	
<ol style="list-style-type: none"> <li>1. To study the characteristics of a series RC Circuit.</li> <li>2. To determine an unknown Low Resistance using Potentiometer.</li> <li>3. To determine an unknown Low Resistance using Carey Foster's Bridge.</li> <li>4. To determine the resistance of a galvanometer using Thomson's method.</li> <li>5. Measurement of field strength B and its variation in a solenoid (determine dB/dx)</li> <li>6. To verify the Thevenin and Norton theorems.</li> <li>7. To verify the Superposition, and Maximum power transfer theorems.</li> <li>8. To determine self-inductance of a coil by Anderson's bridge.</li> <li>9. To study response curve of a Series LCR circuit and determine its (a) Resonant frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Band width.</li> <li>10. To study the response curve of a parallel LCR circuit and determine its (a) Anti- resonant frequency and (b) Quality factor Q.</li> </ol>	
<p><b>Reference Books</b></p>

## 2.7 Core T<sub>4</sub> - Waves and Optics

Waves and Optics	
	<b>4 Credits</b>
<b>Superposition of Collinear Harmonic oscillations</b>	
<p>Linearity and Superposition Principle. Superposition of two collinear oscillations having (1) equal frequencies and (2) different frequencies (Beats).</p> <p>Superposition of N collinear Harmonic Oscillations with (1) equal phase differences and (2) equal frequency differences.</p>	
<b>Superposition of two perpendicular Harmonic Oscillations</b>	
Graphical and Analytical Methods. Lissajous Figures with equal and unequal frequency and their uses.	
<b>Wave Motion</b>	
Plane and Spherical Waves. Longitudinal and Transverse Waves. Plane Progressive (Travelling) Waves. Wave Equation. Particle and Wave Velocities. Differential Equation. Pressure of a Longitudinal Wave. Energy Transport. Intensity of Wave. Water Waves: Ripple and Gravity Waves	
<b>Velocity of Waves</b>	
Velocity of Transverse Vibrations of Stretched Strings. Velocity of Longitudinal Waves in a Fluid in a Pipe. Newton's Formula for Velocity of Sound. Laplace's Correction.	
<b>Superposition of Two Harmonic Waves</b>	
Standing (Stationary) Waves in a String: Fixed and Free Ends. Analytical Treatment. Phase and Group Velocities. Changes with respect to Position and Time. Energy of Vibrating String. Transfer of Energy. Normal Modes of Stretched Strings. Plucked and Struck Strings. Melde's Experiment. Longitudinal Standing Waves and Normal Modes. Open and Closed Pipes. Superposition of N Harmonic Waves.	
<b>Wave Optics</b>	
Electromagnetic nature of light. Definition and properties of wave front. Huygens Principle. Temporal and Spatial Coherence.	
<b>Interference</b>	

Division of amplitude and wavefront. Young's double slit experiment. Lloyd's Mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings: Measurement of wavelength and refractive index.

### **Interferometer**

Michelson Interferometer-(1) Idea of form of fringes (No theory required), (2) Determination of Wavelength, (3) Wavelength Difference, (4) Refractive Index, and (5) Visibility of Fringes. Fabry-Perot interferometer.

### **Diffraction and Holography**

Kirchhoff's Integral Theorem, Fresnel-Kirchhoff's Integral formula. (Qualitative discussion only)

Fraunhofer diffraction: Single slit. Circular aperture, Resolving Power of a telescope. Double slit. Multiple slits. Diffraction grating. Resolving power of grating.

Fresnel Diffraction: Fresnel's Assumptions. Fresnel's Half-Period Zones for Plane Wave. Explanation of Rectilinear Propagation of Light. Theory of a Zone Plate: Multiple Foci of a Zone Plate. Fresnel's Integral, Fresnel diffraction pattern of a straight edge, a slit and a wire.

Holography: Principle of Holography. Recording and Reconstruction Method. Theory of Holography as Interference between two Plane Waves. Point source holograms.

## 2.8 Core P<sub>4</sub> – Wave and Optics Lab

Wave and Optics	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To determine the frequency of an electric tuning fork by Melde's experiment and verify <math>\lambda^2 - T</math> law.</li> <li>2. To investigate the motion of coupled oscillators.</li> <li>3. To study Lissajous Figures.</li> <li>4. Familiarization with: Schuster's focusing; determination of angle of prism.</li> <li>5. To determine refractive index of the Material of a prism using sodium source.</li> <li>6. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.</li> <li>7. To determine the wavelength of sodium source using Michelson's interferometer.</li> <li>8. To determine wavelength of sodium light using Fresnel Biprism.</li> <li>9. To determine wavelength of sodium light using Newton's Rings.</li> <li>10. To determine the thickness of a thin paper by measuring the width of the interference fringes produced by a wedge-shaped Film.</li> <li>11. To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.</li> <li>12. To determine dispersive power and resolving power of a plane diffraction grating.</li> </ol>	
<b>Reference Books</b>

## 2.9 Core T5 - Mathematical Physics-II

Mathematical Physics – II	
	<b>4 Credits</b>
<b>Fourier Series</b>	
<p>Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions. Application. Summing of Infinite Series. Term-by-Term differentiation and integration of Fourier Series. Parseval Identity.</p>	
<b>Frobenius Method and Special Functions</b>	
<p>Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre, Bessel, Hermite and Laguerre Differential Equations. Properties of Legendre Polynomials: Rodrigues Formula, Generating Function, Orthogonality. Simple recurrence relations. Expansion of function in a series of Legendre Polynomials. Bessel Functions of the First Kind: Generating Function, simple recurrence relations. Zeros of Bessel Functions (<math>J_0(x)</math> and <math>J_1(x)</math>) and Orthogonality.</p>	
<b>Some Special Integrals</b>	
<p>Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Error Function (Probability Integral).</p>	
<b>Variational calculus in physics</b>	
<p>Functionals. Basic ideas of functionals. Extremization of action as a basic principle in mechanics. Lagrangian formulation. Euler's equations of motion for simple systems: harmonics oscillators, simple pendulum, spherical pendulum, coupled oscillators. Cyclic coordinates. Symmetries and conservation laws. Legendre transformations and the Hamiltonian formulation of mechanics. Canonical equations of motion. Applications to simple systems.</p>	
<b>Partial Differential Equations</b>	
<p>Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Wave equation and its solution for vibrational modes of a</p>	

stretched string, rectangular and circular membranes. Diffusion Equation.

## 2.10 Core P5 – Mathematical Physics II Lab

Mathematical Physics II	
	<b>2 Credits</b>
<b>Introduction to Numerical computation using numpy and scipy</b>	
Introduction to the python numpy module. Arrays in numpy, array operations, array item selection, slicing, shaping arrays. Basic linear algebra using the linalg submodule. Introduction to online graph plotting using matplotlib. Introduction to the scipy module. Uses in optimization and solution of differential equations.  Introduction to OCTAVE(if time permits)	
<b>Curve fitting, Least square fit, Goodness of fit, standard deviation</b>	
Ohms law to calculate R, Hooke's law to calculate spring constant	
<b>Solution of Linear system of equations by Gauss elimination method and Gauss Seidal method. Diagonalization of matrices, Inverse of a matrix, Eigen vectors, eigen values problems</b>	
Solution of mesh equations of electric circuits (3 meshes)  Solution of coupled spring mass systems (3 masses)	
<b>Generation of Special functions using User defined functions</b>	
Generating and plotting Legendre Polynomials Generating and plotting Bessel function	
<b>Solution of ODE First order Differential equation Euler, modified Euler and Runge-Kutta second order methods Second order differential equation Fixed difference method</b>	

## First order differential equation

1. Radioactive decay
2. Current in RC, LC circuits with DC source
3. Newton's law of cooling
4. Classical equations of motion Second order Differential Equation
5. Harmonic oscillator (no friction)
6. Damped Harmonic oscillator
7. Over damped
8. Critical damped
9. Oscillatory
10. Forced Harmonic oscillator
11. Transient and
12. Steady state solution
13. Apply above to LCR circuits also
14. Solve  $x^2 \frac{d^2y}{dx^2} - 4x(1+x) \frac{dy}{dx} + 2(1+x)y - x^3$  with the boundary condition at  $x=1$ ,  
 $y = \frac{1}{2}e^{2x}$ ,  $\frac{dy}{dx} = \frac{-3}{2}e^{2x} - 0.5$ , in the range  $1 \leq x \leq 3$ . Plot  $y$  and  $\frac{dy}{dx}$  against  $x$  in the given range in  
 the same graph.

## Partial differential equations

1. Wave equation
2. Heat equation
3. Poisson equation
4. Laplace equation

## Reference Books

## 2.11 Core T6 - Thermal Physics

Thermal Physics	
	<b>4 Credits</b>
<b>Introduction to Thermodynamics</b>	
<p>Zeroth and First Law of Thermodynamics: Extensive and intensive Thermodynamic Variables, Thermodynamic Equilibrium, Zeroth Law of Thermodynamics &amp; Concept of Temperature, Concept of Work &amp; Heat, State Functions, First Law of Thermodynamics and its differential form, Internal Energy, First Law &amp; various processes, Applications of First Law: General Relation between CP and CV, Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Co-efficient.</p> <p>Second Law of Thermodynamics: Reversible and Irreversible process with examples. Conversion of Work into Heat and Heat into Work. Heat Engines. Carnot's Cycle, Carnot engine &amp; efficiency. Refrigerator &amp; coefficient of performance, 2nd Law of Thermodynamics: Kelvin-Planck and Clausius Statements and their Equivalence.</p> <p>Carnot's Theorem. Applications of Second Law of Thermodynamics: Thermodynamic Scale of Temperature and its Equivalence to Perfect Gas Scale.</p> <p>Entropy: Concept of Entropy, Clausius Theorem. Clausius Inequality, Second Law of Thermodynamics in terms of Entropy. Entropy of a perfect gas. Principle of Increase of Entropy. Entropy Changes in Reversible and Irreversible processes with examples. Entropy of the Universe. Entropy Changes in Reversible and Irreversible Processes. Principle of Increase of Entropy. Temperature–Entropy diagrams for Cycle. Third Law of Thermodynamics. Unattainability of Absolute Zero.</p>	
<b>Thermodynamic Potentials</b>	
<p>Thermodynamic Potentials: Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy. Their Definitions, Properties and Applications. Surface Films and Variation of Surface Tension with Temperature. Magnetic Work, Cooling due to adiabatic demagnetization, First and second order Phase Transitions with examples, Clausius Clapeyron Equation and Ehrenfest equations</p>	
<b>Maxwell's Thermodynamic Relations</b>	
<p>Derivations and applications of Maxwell's Relations, Maxwell's Relations:(1) Clausius Clapeyron equation, (2) Values of <math>C_p-C_v</math>, (3) TdS Equations, (4) Joule-Kelvin coefficient for Ideal and Van der Waal Gases, (5) Energy equations, (6) Change of Temperature during Adiabatic Process.</p>	
<b>Kinetic Theory of Gases</b>	

Distribution of Velocities: Maxwell-Boltzmann Law of Distribution of Velocities in an Ideal Gas and its Experimental Verification. Doppler Broadening of Spectral Lines and Stern's Experiment. Mean, RMS and Most Probable Speeds. Degrees of Freedom. Law of Equipartition of Energy (No proof required). Specific heats of Gases.

Molecular Collisions: Mean Free Path. Collision Probability. Estimates of Mean Free Path. Transport Phenomenon in Ideal Gases: (1) Viscosity, (2) Thermal Conductivity and (3) Diffusion. Brownian Motion and its Significance.

Real Gases: Behavior of Real Gases: Deviations from the Ideal Gas Equation. The Virial Equation. Andrew's Experiments on CO<sub>2</sub> Gas. Critical Constants. Continuity of Liquid and Gaseous State. Vapour and Gas. Boyle Temperature. Van der Waal's Equation of State for Real Gases. Values of Critical Constants. Law of Corresponding States. Comparison with Experimental Curves. P-V Diagrams. Joule's Experiment. Free Adiabatic Expansion of a Perfect Gas. Joule-Thomson Porous Plug Experiment. Joule-Thomson Effect for Real and Van der Waal Gases. Temperature of Inversion. Joule-Thomson Cooling.

## 2.12 Core P6 – Thermal Physics Lab

Thermal Physics	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.</li> <li>2. To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.</li> <li>3. To determine the Coefficient of Thermal Conductivity of Cu by Angstrom's Method.</li> <li>4. To determine the Coefficient of Thermal Conductivity of a bad conductor by Lee and Charlton's disc method.</li> <li>5. To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer (PRT).</li> <li>6. To study the variation of Thermo-Emf of a Thermocouple with Difference of Temperature of its Two Junctions.</li> <li>7. To calibrate a thermocouple to measure temperature in a specified Range using (1) Null Method, (2) Direct measurement using Op-Amp difference amplifier and to determine Neutral Temperature</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B. L. Flint and H.T. Worsnop, 1971, Asia Publishing House</li> <li>▶ A Text Book of Practical Physics, I.Prakash &amp; Ramakrishna, 11th Ed., 2011, Kitab Mahal</li> <li>▶ Advanced level Physics Practicals, Michael Nelson and Jon M. ## 2.13 Core T7 - Digital Systems and Applications

Digital Systems and Applications	
	<b>4 Credits</b>
<b>Integrated Circuits</b>	
Active & Passive components. Discrete components. Wafer. Chip. Advantages and drawbacks of ICs. Scale of integration: SSI, MSI, LSI and VLSI (basic idea and definitions only). Classification of ICs. Examples of Linear and Digital ICs.	
<b>Digital Circuits</b>	
Difference between Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Binary to Decimal Conversion. BCD, Octal and Hexadecimal numbers. AND, OR and NOT Gates (realization using Diodes and Transistor). NAND and NOR Gates as Universal Gates. XOR and XNOR Gates and application as Parity Checkers.	
<b>Boolean algebra</b>	
De Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Idea of Minterms and Maxterms. Conversion of a Truth table into Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map.	
<b>Data processing circuits</b>	
Basic idea of Multiplexers, De-multiplexers, Decoders, Encoders.	
<b>Circuits</b>	
Arithmetic Circuits: Binary Addition. Binary Subtraction using 2's Complement. Half and Full Adders. Half & Full Subtractors, 4-bit binary Adder/Subtractor.	
Sequential Circuits: SR, D, and JK Flip-Flops. Clocked (Level and Edge Triggered) Flip-Flops. Preset and Clear operations. Race-around conditions in JK Flip-Flop. M/S JK Flip-Flop.	
<b>Timers</b>	
IC 555: block diagram and applications: Astable multivibrator and Monostable multivibrator.	
<b>Shift registers</b>	

Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out and Parallel-in-Parallel-out Shift Registers (only up to 4 bits).

### Counters (4 bits)

Ring Counter. Asynchronous counters, Decade Counter. Synchronous Counter.

### Computer Organization

Input/Output Devices. Data storage (idea of RAM and ROM). Computer memory. Memory organization & addressing. Memory Interfacing. Memory Map.

### Reference Books

## 2.15 Core T<sub>8</sub> - Mathematical Physics III

<b>Mathematical Physics III</b>	
	<b>4 Credits</b>
<b>Complex Analysis</b>	
<p>Brief Revision of Complex Numbers and their Graphical Representation. Euler's formula, De Moivre's theorem, Roots of Complex Numbers. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions. Examples of analytic functions. Singular functions: poles and branch points, order of singularity, branch cuts. Integration of a function of a complex variable. Cauchy's Inequality. Cauchy's Integral formula. Simply and multiply connected region. Laurent and Taylor's expansion. Residues and Residue Theorem. Application in solving Definite Integrals.</p>	
<b>Integrals Transforms</b>	
<p>Fourier Transforms: Fourier Integral theorem. Fourier Transform. Examples. Fourier transform of trigonometric, Gaussian, finite wave train &amp; other functions. Representation of Dirac delta function as a Fourier Integral. Fourier transform of derivatives, Inverse Fourier transform, Convolution theorem. Properties of Fourier transforms (translation, change of scale, complex conjugation, etc.). Three dimensional Fourier transforms with examples. Application of Fourier Transforms to differential equations: One dimensional Wave and Diffusion/Heat Flow Equations.</p>	
<b>Matrices</b>	
<p>Addition and Multiplication of Matrices. Null Matrices. Diagonal, Scalar and Unit Matrices. Upper-Triangular and Lower-Triangular Matrices. Transpose of a Matrix. Symmetric and Skew-Symmetric Matrices. Conjugate of a Matrix. Hermitian and Skew-Hermitian Matrices. Singular and Non-Singular matrices. Orthogonal and Unitary Matrices. Trace of a Matrix. Inner Product</p>	
<b>Eigen-values and Eigenvectors</b>	
<p>Cayley- Hamilton Theorem. Diagonalization of Matrices. Solutions of Coupled Linear Ordinary Differential Equations. Functions of a Matrix.</p>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Mathematical Methods for Physics and Engineers, K.F Riley, M.P. Hobson and S. J. ## 2.16 Core P8 – Mathematical Physics III Lab

## Mathematical Physics III

2 Credits

## List of Practical

1. Solve differential equations:

$$\frac{dy}{dx} = e^{-x} \text{ with } y = 0 \text{ for } x = 0$$

$$\frac{dy}{dx} + e^{-x} = x^2$$

$$\frac{d^2y}{dt^2} + 2\frac{dy}{dt} = -y$$

$$\frac{d^2y}{dt^2} + e^{-t}\frac{dy}{dt} = -y$$

2. Dirac Delta Function:

Evaluate  $\frac{1}{\sqrt{2\pi\sigma^2}} \int e^{-\frac{(x-2)^2}{2\sigma^2}} (x+3) dx$ , for  $\sigma=1, .1, .01$  and show it tends to 5

3. Fourier Series

Program to sum  $\sum_{n=1}^{10} (.2)^n$  Evaluate the Fourier coefficients of a given periodic function (square wave)

4. Frobenius method and Special functions:

$$\int_{-1}^{+1} P_n(\mu)P_m(\mu)d\mu = \delta_{n,m}$$

Plot  $P_n(x), j_\nu(x)$

Show recursion relation

5. Calculation of error for each data point of observations recorded in experiments done in previous

semesters (choose any two).

6. Calculation of least square fitting manually without giving weightage to error. Confirmation of least square fitting of data through computer program.
7. Evaluation of trigonometric functions e.g.  $\sin \theta$ , Given Bessel's function at N points find its value at an intermediate point. Complex analysis: Integrate  $1/(x^2+2)$  numerically and check with computer integration
8. Compute the nth roots of unity for  $n = 2, 3,$  and  $4.$
9. Find the two square roots of  $-5+12j.$
10. Integral transform: FFT of  $e^{-x^2}.$

## 2.17 Core Tg - Elements of Modern Physics

Elements of Modern Physics	
	<b>4 Credits</b>
<b>Unit 1</b>	
<p>Planck's quantum, Planck's constant and light as a collection of photons; Blackbody Radiation: Quantum theory of Light; Photo-electric effect and Compton scattering. De Broglie wavelength and matter waves; Davisson-Germer experiment. Wave description of particles by wave packets. Group and Phase velocities and relation between them. Two-Slit experiment with electrons. Probability. Wave amplitude and wave functions.</p>	
<b>Unit 2</b>	
<p>Position measurement- gamma ray microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle (Uncertainty relations involving Canonical pair of variables): Derivation from Wave Packets impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle- application to virtual particles and range of an interaction.</p> <p>Two slit interference experiment with photons, atoms and particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of a wave function, probabilities and normalization; Probability and probability current densities in one dimension.</p>	
<b>Unit 3</b>	
<p>One dimensional infinitely rigid box- energy eigenvalues and eigenfunctions, normalization; Quantum dot as example; Quantum mechanical scattering and tunnelling in one dimension-across a step potential &amp; rectangular potential barrier.</p> <p>Size and structure of atomic nucleus and its relation with atomic weight; Impossibility of an electron being in the nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, Liquid Drop model: semi-empirical mass formula and binding energy, Nuclear Shell Model and magic numbers.</p>	
<b>Unit 4</b>	
<p>Radioactivity: stability of the nucleus; Law of radioactive decay; Mean life and half-life; Alpha decay; Beta decay- energy released, spectrum and Pauli's prediction of neutrino; Gamma ray emission, energy-momentum conservation: electron-positron pair creation by gamma photons in the vicinity of a nucleus.</p>	

Fission and fusion- mass deficit, relativity and generation of energy; Fission - nature of fragments and emission of neutrons. Nuclear reactor: slow neutrons interacting with Uranium 235; Fusion and thermonuclear reactions driving stellar energy (brief qualitative discussions).

Lasers: Einstein's A and B coefficients. Metastable states. Spontaneous and Stimulated emissions. Optical Pumping and Population Inversion. Three-Level and Four-Level Lasers. Ruby Laser and He-Ne Laser. Basic lasing.

## 2.18 Core Pg – Elements of Modern Physics Lab

Elements of Modern Physics	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. Measurement of Planck's constant using black body radiation and photo-detector</li> <li>2. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light</li> <li>3. To determine work function of material of filament of directly heated vacuum diode.</li> <li>4. To determine the Planck's constant using LEDs of at least 4 different colours.</li> <li>5. To determine the wavelength of H-alpha emission line of Hydrogen atom.</li> <li>6. To determine the ionization potential of mercury.</li> <li>7. To determine the absorption lines in the rotational spectrum of Iodine vapour.</li> <li>8. To determine the value of <math>e/m</math> by (a) Magnetic focusing or (b) Bar magnet.</li> <li>9. To setup the Millikan oil drop apparatus and determine the charge of an electron.</li> <li>10. To show the tunneling effect in tunnel diode using I-V characteristics.</li> <li>11. To determine the wavelength of laser source using diffraction of single slit.</li> <li>12. To determine the wavelength of laser source using diffraction of double slits.</li> <li>13. To determine (1) wavelength and (2) angular spread of He-Ne laser using plane diffraction grating</li> </ol> <p>Note: Many of these experiments may be too expensive to set up in some colleges.</p>

<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House</li> <li>▶ Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers</li> <li>▶ A Text Book of Practical Physics, I.Prakash &amp; Ramakrishna, 11th Edn, 2011, Kitab Mahal</li> </ul>	

## 2.19 Core T10 - Analog Systems and Applications

Analog Systems and Applications	
	<b>4 Credits</b>
<b>Semiconductor Diodes</b>	
P and N type semiconductors. Energy Level Diagram. Conductivity and Mobility, Concept of Drift velocity. PN Junction Fabrication (Simple Idea). Barrier Formation in PN Junction Diode. Static and Dynamic Resistance. Current Flow Mechanism in Forward and Reverse Biased Diode. Drift Velocity. Derivation for Barrier Potential, Barrier Width and Current for Step Junction. Current Flow Mechanism in Forward and Reverse Biased Diode.	
<b>Two-terminal Devices and their Applications</b>	
Rectifier Diode: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers, Calculation of Ripple Factor and Rectification Efficiency, C-filter  Zener Diode and Voltage Regulation. Principle and structure of (1) LEDs, (2) Photodiode and (3) Solar Cell.	
<b>Bipolar Junction transistors</b>	
n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains $\alpha$ and $\beta$ Relations between $\alpha$ and $\beta$ . Load Line analysis of Transistors. DC Load line and Q-point. Physical Mechanism of Current Flow. Active, Cutoff and Saturation Regions.	
<b>Field Effect transistors</b>	
Basic principle of operations only.	
<b>Amplifiers</b>	
Amplifiers: Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameters, Equivalent Circuit. Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Classification of Class A, B & C Amplifiers. Frequency response of a CE amplifier.  Coupled Amplifier: Two stage RC-coupled amplifier.  Feedback in Amplifiers: Effects of Positive and Negative Feedback on Input Impedance, Output Impedance, Gain, Stability, Distortion and Noise.  Sinusoidal Oscillators: Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator,	

determination of Frequency. Hartley & Colpitts oscillators.

Operational Amplifiers (Black Box approach): Characteristics of an Ideal and Practical Op-Amp. (IC 741) Open-loop and Closed-loop Gain. Frequency Response. CMRR. Slew Rate and concept of Virtual ground.

Applications of Op-Amps: Linear - (1) Inverting and non-inverting amplifiers, (2) Adder, (3) Subtractor, (4) Differentiator, (5) Integrator, (6) Log amplifier, (7) Zero crossing detector (8) Wein bridge oscillator. Non-linear – (1) inverting and non-inverting comparators, (2) Schmidt triggers.

Conversion: Resistive network (Weighted and R-2R Ladder). Accuracy and Resolution. A/D Conversion (successive approximation)

## 2.20 Core P10 – Analog Systems and Applications Lab

Analog Systems and Applications	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To study V-I characteristics of PN junction diode, and Light emitting diode.</li> <li>2. To study the V-I characteristics of a Zener diode and its use as voltage regulator.</li> <li>3. Study of V-I &amp; power curves of solar cells, and find maximum power point &amp; efficiency.</li> <li>4. To study the characteristics of a Bipolar Junction Transistor in CE configuration.</li> <li>5. To study the various biasing configurations of BJT for normal class A operation.</li> <li>6. To design a CE transistor amplifier of a given gain (mid-gain) using voltage divider bias.</li> <li>7. To study the frequency response of voltage gain of a RC-coupled transistor amplifier.</li> <li>8. To design a Wien bridge oscillator for given frequency using an op-amp.</li> <li>9. To design a phase shift oscillator of given specifications using BJT.</li> <li>10. To study the Colpitt's oscillator.</li> <li>11. To design a digital to analog converter (DAC) of given specifications.</li> <li>12. To study the analog to digital convertor (ADC) IC.</li> <li>13. To design an inverting amplifier using Op-amp (741,351) for dc voltage of given gain</li> <li>14. To design inverting amplifier using Op-amp (741,351) and study its frequency response</li> <li>15. To design non-inverting amplifier using Op-amp (741,351) &amp; study its frequency response</li> <li>16. To study the zero-crossing detector and comparator</li> <li>17. To add two dc voltages using Op-amp in inverting and non-inverting mode</li> <li>18. To design a precision Differential amplifier of given I/O specification using Op-amp.</li> <li>19. To investigate the use of an op-amp as an Integrator.</li> <li>20. To investigate the use of an op-amp as a Differentiator.</li> <li>21. To design a circuit to simulate the solution of a 1st/2nd order differential equation.</li> </ol>

## 2.21 Core T11 - Quantum Mechanics and Applications

Quantum Mechanics and Applications	
	<b>4 Credits</b>
<b>Schrodinger Equation</b>	
<p>Time dependent Schrodinger equation: Time dependent Schrodinger equation and dynamical evolution of a quantum state; Properties of Wave Function. Interpretation of Wave Function Probability and probability current densities in three dimensions; Conditions for Physical Acceptability of Wave Functions. Normalization. Linearity and Superposition Principles. Eigen-values and Eigen-functions. Position, momentum and Energy operators; commutator of position and momentum operators; Expectation values of position and momentum. Wave Function of a Free Particle.</p> <p>Time independent Schrodinger equation-Hamiltonian, stationary states and energy eigen-values; expansion of an arbitrary wave-function as a linear combination of energy eigen-functions; General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states; Application to spread of Gaussian wave-packet for a free particle in one dimension; wave packets, Fourier transforms and momentum space wave-function; Position-momentum uncertainty principle.</p>	
<b>General discussion of bound states in an arbitrary potential</b>	
<p>continuity of wave function, boundary condition and emergence of discrete energy levels; application to one-dimensional problem-square well potential; Quantum mechanics of simple harmonic oscillator-energy levels and energy eigen-functions using Frobenius method; Hermite polynomials; ground state, zero point energy &amp; uncertainty principle.</p>	
<b>Quantum theory of hydrogen-like atoms</b>	
<p>Time independent Schrodinger equation in spherical polar coordinates; separation of variables for second order partial differential equation; angular momentum operator &amp; quantum numbers; Radial wave-functions from Frobenius method; shapes of the probability densities for ground &amp; first excited states; Orbital angular momentum quantum numbers <math>l</math> and <math>m</math>; s, p, d shells.</p>	
<b>Atoms in Electric &amp; Magnetic Fields</b>	
<p>Electron angular momentum. Space quantization. Electron Spin and Spin Angular Momentum. Larmor's Theorem. Spin Magnetic Moment. Stern-Gerlach Experiment. Zeeman Effect: Electron Magnetic Moment and Magnetic Energy, Gyromagnetic Ratio and Bohr Magnetron.</p>	

### Atoms in External Magnetic Fields

Normal and Anomalous Zeeman Effect. Paschen Back and Stark Effect (Qualitative Discussion only).

### Many electron atoms

Pauli's Exclusion Principle. Symmetric & Antisymmetric Wave Functions. Periodic table. Fine structure. Spin orbit coupling. Spectral Notations for Atomic States. Total angular momentum. Vector Model. Spin-orbit coupling in atoms- L-S and J-J couplings. Hund's Rule. Term symbols. Spectra of Hydrogen and Alkali Atoms (Na etc.).

### Reference Books

- ▶ Quantum Mechanics for Scientists & Engineers, D.A.B. Miller, 2008, Cambridge University Press

#### Additional Books for Reference

- ▶ Quantum Mechanics, Eugen Merzbacher, 2004, John Wiley and Sons, Inc.
- ▶ Introduction to Quantum Mechanics, D.J. Griffith, 2nd Ed. 2005, Pearson Education
- ▶ Quantum Mechanics, Walter Greiner, 4th Edn., 2001, Springer

## 2.22 Core P11 – Quantum Mechanics and Applications Lab

### Quantum Mechanics and Applications

2 Credits

#### List of Practical

1. Solve the s-wave Schrodinger equation for the ground state and the first excited state of the hydrogen atom:

$$\frac{d^2y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E] \text{ where } V(r) = -\frac{e^2}{r}$$

Here, m is the reduced mass of the electron. Obtain the energy eigenvalues and plot the corresponding wavefunctions. Remember that the ground state energy of the hydrogen atom is -13.6 eV. Take  $e = 3.795 \text{ (eV}\text{\AA})^{1/2}$ ,  $\hbar c = 1973 \text{ (eV}\text{\AA})$  and  $m = 0.511 \times 10^6 \text{ eV}/c^2$ .

2. Solve the s-wave radial Schrodinger equation for an atom:

$$\frac{d^2y}{dr^2} = A(r)u(r), A(r) = \frac{2\mu}{\hbar^2} [V(r) - E]$$

Where m is the reduced mass of the system (which can be chosen to be the mass of an electron), for the screened coulomb potential

$$V(r) = -\frac{e^2}{r} e^{-r/a}$$

Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits. Also, plot the corresponding wave function. Take  $e = 3.795 \text{ (eV}\text{\AA})^{1/2}$ ,  $m = 0.511 \times 10^6 \text{ eV}/c^2$ , and  $a = 3 \text{ \AA}, 5 \text{ \AA}, 7 \text{ \AA}$ . In these units  $\hbar c = 1973 \text{ (eV}\text{\AA})$ . The ground state energy is expected to be above -12 eV in all three cases.

3. Solve the s-wave radial Schrodinger equation for a particle of mass m:

$$\frac{d^2y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

For the an-harmonic oscillator potential

$$V(r) = \frac{1}{2} kr^2 + \frac{1}{3} br^3$$

for the ground state energy (in MeV) of particle to an accuracy of three significant digits. Also, plot the corresponding wave function. Choose  $m = 940 \text{ MeV}/c^2$ ,  $k = 100 \text{ MeV fm}^{-2}$ ,  $b = 0, 10, 30 \text{ MeV fm}^{-3}$ . In these units,  $\hbar c = 197.3 \text{ MeV fm}$ . The ground state energy  $E$  is expected to lie between 90 and 110 MeV for all three cases.

4. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule:

$$\frac{d^2 y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E] \text{ where } V(r) = -\frac{e^2}{r}$$

Where  $\mu$  is the reduced mass of the two-atom system for the Morse potential

$$V(r) = D(e^{-2\alpha r'} - e^{-\alpha r'}), \quad r' = \frac{r - r_0}{r}$$

Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function. Take:  $m = 940 \times 10^6 \text{ eV}/c^2$ ,  $D = 0.755501 \text{ eV}$ ,  $\alpha = 1.44$ ,  $r_0 = 0.131349 \text{ \AA}$

Laboratory Based Equipments:

3. Study of Electron spin resonance- determine magnetic field as a function of the resonance frequency
4. Study of Zeeman effect: with external magnetic field; Hyperfine splitting
5. To show the tunneling effect in tunnel diode using I-V characteristics.
6. Quantum efficiency of CCDs

$$\frac{d^2 y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

### Reference Books

## 2.23 Core T12 - Solid State Physics

Solid State Physics	
	<b>4 Credits</b>
<b>Crystal Structure</b>	
Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis – Central and Non-Central Elements. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. Atomic and Geometrical Factor.	
<b>Elementary Lattice Dynamics</b>	
Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative Description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids, $T^3$ law	
<b>Magnetic Properties of Matter</b>	
Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of dia- and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.	
<b>Dielectric Properties of Materials</b>	
Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. Cauchy and Sellmeier relations. Langevin-Debye equation. Complex Dielectric Constant. Optical Phenomena. Application: Plasma Oscillations, Plasma Frequency, Plasmons, TO modes.	
<b>Ferroelectric Properties of Materials</b>	
Structural phase transition, Classification of crystals, Piezoelectric effect, Pyroelectric effect, Ferroelectric effect, Electrostrictive effect, Curie-Weiss Law, Ferroelectric domains, PE hysteresis loop.	
<b>Elementary band theory</b>	
Kronig Penny model. Band Gap. Conductor, Semiconductor (P and N type) and insulator. Conductivity of Semiconductor, mobility, Hall Effect. Measurement of conductivity (04 probe method) & Hall coefficient.	

## Superconductivity

Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth. Isotope effect. Idea of BCS theory (No derivation)

## 2.25 Core T13 - Electromagnetic Theory

Electromagnetic Theory	
	<b>4 Credits</b>
<b>Maxwell Equations</b>	
<p>Maxwell's equations. Displacement Current. Vector and Scalar Potentials. Gauge Transformations: Lorentz and Coulomb Gauge. Boundary Conditions at Interface between Different Media. Wave Equations. Plane Waves in Dielectric Media. Poynting Theorem and Poynting Vector. Electromagnetic (EM) Energy Density. Physical Concept of Electromagnetic Field Energy Density, Momentum Density and Angular Momentum Density.</p>	
<b>EM Wave Propagation in Unbounded Media</b>	
<p>Plane EM waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance. Propagation through conducting media, relaxation time, skin depth. Wave propagation through dilute plasma, electrical conductivity of ionized gases, plasma frequency, refractive index, skin depth, application to propagation through ionosphere.</p>	
<b>EM Wave in Bounded Media</b>	
<p>Boundary conditions at a plane interface between two media. Reflection &amp; Refraction of plane waves at plane interface between two dielectric media-Laws of Reflection &amp; Refraction. Fresnel's Formulae for perpendicular &amp; parallel polarization cases, Brewster's law. Reflection &amp; Transmission coefficients. Total internal reflection, evanescent waves. Metallic reflection (normal Incidence)</p>	
<b>Polarization of Electromagnetic Waves</b>	
<p>Description of Linear, Circular and Elliptical Polarization. Propagation of E.M. Waves in Anisotropic Media. Symmetric Nature of Dielectric Tensor. Fresnel's Formula. Uniaxial and Biaxial Crystals. Light Propagation in Uniaxial Crystal. Double Refraction. Polarization by Double Refraction. Nicol Prism. Ordinary &amp; extraordinary refractive indices. Production &amp; detection of Plane, Circularly and Elliptically Polarized Light. Phase Retardation Plates: Quarter-Wave and Half-Wave Plates. Babinet Compensator and its Uses. Analysis of Polarized Light</p> <p>Rotatory Polarization: Optical Rotation. Biot's Laws for Rotatory Polarization. Fresnel's Theory of optical rotation. Calculation of angle of rotation. Experimental verification of Fresnel's theory. Specific rotation. Laurent's half-shade polarimeter.</p>	

### Wave guides

Planar optical wave guides. Planar dielectric wave guide. Condition of continuity at interface. Phase shift on total reflection. Eigenvalue equations. Phase and group velocity of guided waves. Field energy and Power transmission.

### Optical Fibres

Numerical Aperture. Step and Graded Indices (Definitions Only). Single and Multiple Mode Fibres (Concept and Definition Only).

## 2.27 Core T14 – Statistical Mechanics

Statistical Mechanics	
	<b>4 Credits</b>
<b>Classical Statistical Mechanics</b>	
Macrostate & Microstate, Elementary Concept of Ensemble, Microcanonical ensemble, Phase Space, Entropy and Thermodynamic Probability, Canonical ensemble, Partition Function, Thermodynamic Functions of an Ideal Gas, Classical Entropy Expression, Gibbs Paradox, Sackur Tetrode equation, Law of Equipartition of Energy (with proof) – Applications to Specific Heat and its Limitations, Thermodynamic Functions of a Two-Energy Levels System, Negative Temperature. Grand canonical ensemble and chemical potential.	
<b>Classical Theory of Radiation</b>	
Properties of Thermal Radiation. Blackbody Radiation. Pure temperature dependence. Kirchhoff's law. Stefan-Boltzmann law: Thermodynamic proof. Radiation Pressure. Wien's Displacement law. Wien's Distribution Law. Saha's Ionization Formula. Rayleigh-Jean's Law. Ultraviolet Catastrophe.	
<b>Quantum Theory of Radiation</b>	
Spectral Distribution of Black Body Radiation. Planck's Quantum Postulates. Planck's Law of Blackbody Radiation: Experimental Verification. Deduction of (1) Wien's Distribution Law, (2) Rayleigh-Jeans Law, (3) Stefan-Boltzmann Law, (4) Wien's Displacement law from Planck's law.	
<b>Bose-Einstein Statistics:</b>	
B-E distribution law, Thermodynamic functions of a strongly Degenerate Bose Gas, Bose Einstein condensation, properties of liquid He (qualitative description), Radiation as a photon gas and Thermodynamic functions of photon gas. Bose derivation of Planck's law.	
<b>Fermi-Dirac Statistics:</b>	
Fermi-Dirac Distribution Law, Thermodynamic functions of a Completely and strongly Degenerate Fermi Gas, Fermi Energy, Electron gas in a Metal, Specific Heat of Metals, Relativistic Fermi gas, White Dwarf Stars, Chandrasekhar Mass Limit.	
<b>Reference Books</b>

## 2.28 Core P14 – Statistical Mechanics Lab

### Statistical Mechanics

2 Credits

#### List of Practical

1. Computational analysis of the behaviour of a collection of particles in a box that satisfy Newtonian mechanics and interact via the Lennard-Jones potential, varying the total number of particles  $N$  and the initial conditions:
  - a) Study of local number density in the equilibrium state (i) average; (ii) fluctuations
  - b) Study of transient behaviour of the system (approach to equilibrium)
  - c) Relationship of large  $N$  and the arrow of time
  - d) Computation of the velocity distribution of particles for the system and comparison with the Maxwell velocity distribution
  - e) Computation and study of mean molecular speed and its dependence on particle mass
  - f) Computation of fraction of molecules in an ideal gas having speed near the most probable speed
2. Computation of the partition function  $Z(\square)$  for examples of systems with a finite number of single particle levels (e.g., 2 level, 3 level, etc.) and a finite number of non-interacting particles  $N$  under Maxwell-Boltzmann, Fermi-Dirac and Bose- Einstein statistics:
  - a) Study of how  $Z_N(V, T)$ , average energy  $\langle E \rangle$ , energy fluctuation  $\Delta E$ , specific heat at constant volume  $C_v$ , depend upon the temperature  $T$ , total number of particles  $N$  and the spectrum of single particle states.
  - b) Ratios of occupation numbers of various states for the systems considered above
  - c) Computation of physical quantities at large and small temperature  $T$  and comparison of various statistics at large and small temperature  $T$ .
3. Plot Planck's law for Black Body radiation and compare it with Raleigh-Jeans Law at high temperature and low temperature.
4. Plot Specific Heat of Solids (a) Dulong-Petit law, (b) Einstein distribution function, (c) Debye distribution function for high temperature and low temperature and compare them for these two cases.
5. Plot the following functions with energy at different temperatures
  - a) Maxwell-Boltzmann distribution

- b) Fermi-Dirac distribution
- c) Bose-Einstein distribution

## 3 Department Specific Electives Subjects Syllabus

### 3.1 DSE T<sub>1</sub> - Advanced Mathematical Physics I

Advanced Mathematical Physics	
	<b>4 Credits</b>
<b>Laplace Transform</b>	
Laplace Transform (LT) of Elementary functions. Properties of LTs: Change of Scale Theorem, Shifting Theorem. LTs of 1st and 2nd order Derivatives and Integrals of Functions, Derivatives and Integrals of LTs. LT of Unit Step function, Dirac Delta function, Periodic Functions. Convolution Theorem. Inverse LT. Application of Laplace Transforms to 2nd order Differential Equations: Damped Harmonic Oscillator, Simple Electrical Circuits, Coupled differential equations of 1st order. Solution of heat flow along infinite bar using Laplace transform.	
<b>Linear Vector Spaces</b>	
Abstract Systems. Binary Operations and Relations. Introduction to Groups and Fields. Vector Spaces and Subspaces. Linear Independence and Dependence of Vectors. Basis and Dimensions of a Vector Space. Change of basis. Homomorphism and Isomorphism of Vector Spaces. Linear Transformations. Algebra of Linear Transformations. Non-singular Transformations. Representation of Linear Transformations by Matrices.  Inner products. Gram-Schmidt orthogonalization. Orthogonal and unitary transformations and their matrix representations.	
<b>Cartesian Tensors</b>	
Transformation of Co-ordinates. Einstein's Summation Convention. Relation between Direction Cosines. Tensors. Algebra of Tensors. Sum, Difference and Product of Two Tensors. Contraction. Quotient Law of Tensors. Symmetric and Anti-symmetric Tensors. Invariant Tensors: Kronecker and Alternating Tensors. Association of Antisymmetric Tensor of Order Two and Vectors. Vector Algebra and Calculus using Cartesian Tensors: Scalar and Vector Products, Scalar and Vector Triple Products. Differentiation. Gradient, Divergence and Curl of Tensor Fields. Vector Identities. Tensorial Formulation of Analytical Solid Geometry: Equation of a Line. Angle Between Lines. Projection of a Line on another Line. Condition for Two Lines to be Coplanar. Foot of the Perpendicular from a Point on a Line. Rotation Tensor (No Derivation). Isotropic Tensors. Tensorial Character of Physical Quantities. Moment of Inertia Tensor. Stress	

and Strain Tensors: Symmetric Nature. Elasticity Tensor. Generalized Hooke's Law.

### **General Tensors**

Transformation of Co-ordinates. Minkowski Space. Contravariant & Covariant Vectors. Contravariant, Covariant and Mixed Tensors. Kronecker Delta and Permutation Tensors. Algebra of Tensors. Sum, Difference & Product of Two Tensors. Contraction. Quotient Law of Tensors. Symmetric and Anti-symmetric Tensors. Metric Tensor.

## 3.2 DSE P1 – Advanced Mathematical Physics I Lab

### Advanced Mathematical Physics I

2 Credits

#### List of Practical

1. Linear algebra:

- a. Multiplication of two 3 x 3 matrices.
- b. Eigenvalue and eigenvectors of

$$\begin{pmatrix} 2 & 1 & 1 \\ 1 & 3 & 2 \\ 3 & 1 & 4 \end{pmatrix} ; \begin{pmatrix} 1 & -t \\ 2 & 2 \\ 4 & 4 \end{pmatrix} ; \begin{pmatrix} 3+4t & 2 & -t \\ 4 & 4 & 3 \\ 3 & -2t & 3 \end{pmatrix} ; \begin{pmatrix} 2t & 2t & 5 \end{pmatrix}$$

2. Orthogonal polynomials as eigen-functions of Hermitian differential operators.
3. Determination of the principal axes of moment of inertia through diagonalization.
4. Vector space of wave functions in Quantum Mechanics: Position and momentum differential operators and their commutator, wave functions for stationary states as eigen-functions of Hermitian differential operator.
5. Lagrangian formulation in Classical Mechanics with constraints.
6. Study of geodesics in Euclidean and other spaces (surface of a sphere, etc).
7. Estimation of ground state energy and wave function of a quantum system.

#### Reference Books

- ▶ Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific and Engineering Applications: A. Vande Wouwer, P. Saucez, C. V. Fernández. 2014 Springer ISBN: 978-3319067896

### 3.3 DSE T2 - Advanced Mathematical Physics II

Advanced Mathematical Physics II	
	<b>6 Credits</b>
<b>Calculus of Variations:</b>	
<p>Variational Calculus: Recapitulation of the Variational Principle, Euler-Lagrange's Equations of Motion Euler angles, spherical top and symmetric top. Symmetry and conservation laws. Canonical Pair of Variables. Definition of Generalized Force: Definition of Hamiltonian (Legendre Transformation). Hamilton's Principle. Poisson Brackets and their properties. Canonical transformations. Action-angle variables for simple systems.</p>	
<b>Group Theory</b>	
<p>Review of sets, Mapping and Binary Operations, Relation, Types of Relations.</p> <p>Groups: Elementary properties of groups, uniqueness of solution, Subgroup, Centre of a group, Co-sets of a subgroup, cyclic group, Permutation/Transformation. Homomorphism and Isomorphism of group. Normal and conjugate subgroups, Completeness and Kernel.</p> <p>Some special groups with operators. Matrix Representations: Reducible and Irreducible representations. Schur's lemma. Orthogonality theorems. Character tables and their uses. Application to small vibrations.</p>	
<b>Advanced Probability Theory:</b>	
<p>Fundamental Probability Theorems. Conditional Probability, Bayes' Theorem, Repeated Trials, Binomial and Multinomial expansions. Random Variables and probability distributions, Expectation and Variance, Special Probability distributions: The binomial distribution, The poisson distribution, Continuous distribution: The Gaussian (or normal) distribution, The principle of least squares.</p>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Mathematical Methods for Physicists: Weber and Arfken, 2005, Academic Press.</li> <li>▶ Mathematical Methods for Physicists: A Concise Introduction: Tai L. Chow, 2000, Cambridge Univ. Press.</li> <li>▶ Elements of Group Theory for Physicists by A. W. Joshi, 1997, John Wiley.</li> <li>▶ Group Theory and its Applications to Physical Problems by Morton Hamermesh, 1989, Dover</li> <li>▶ Introduction to Mathematical Physics: Methods &amp; Concepts: Chun Wa Wong, 2012, Oxford University Press</li> <li>▶ Introduction to Mathematical Probability, J. V. Uspensky, 1937, Mc Graw-Hill.</li> </ul>	

### 3.4 DSE T<sub>3</sub> - Classical Dynamics

Classical Dynamics	
	<b>6 Credits</b>
<b>Classical Mechanics of Point Particles</b>	
<p>Review of Newtonian Mechanics; Application to the motion of a charge particle in external electric and magnetic fields- motion in uniform electric field, magnetic field- gyroradius and gyrofrequency, motion in crossed electric and magnetic fields. Generalized coordinates and velocities,</p> <p>Recap of Lagrangian and Hamiltonian mechanics. Applications: Hamiltonian for a harmonic oscillator, solution of Hamilton's equation for Simple Harmonic Oscillations; particle in a central force field- conservation of angular momentum and energy. Effective potential. The Laplace-Runge-Lenz vector.</p>	
<b>Small Amplitude Oscillations</b>	
<p>Minima of potential energy and points of stable equilibrium, expansion of the potential energy around a minimum, small amplitude oscillations about the minimum, normal modes of oscillations example of N identical masses connected in a linear fashion to (N -1) - identical springs.</p>	
<b>Special Theory of Relativity</b>	
<p>Postulates of Special Theory of Relativity. Lorentz Transformations. Minkowski space. The invariant interval, light cone and world lines. Space-time diagrams. Time-dilation, length contraction and twin paradox. Four-vectors: space-like, time-like and light-like. Four-velocity and acceleration. Metric and alternating tensors. Four-momentum and energy-momentum relation. Doppler effect from a four-vector perspective. Concept of four-force. Conservation of four-momentum. Relativistic kinematics. Application to two-body decay of an unstable particle.</p>	
<b>Fluid Dynamics</b>	
<p>Density <math>\rho</math> and pressure <math>P</math> in a fluid, an element of fluid and its velocity, continuity equation and mass conservation, stream-lined motion, laminar flow, Poiseuille's equation for flow of a liquid through a pipe, Navier-Stokes equation, qualitative description of turbulence, Reynolds number.</p>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Classical Mechanics, H.Goldstein, C.P. Poole, J.L. Safko, 3rd Edn. 2002, Pearson Education.</li> <li>▶ Mechanics, L. D. Landau and E. M. - ▶ Classical Mechanics: An introduction, Dieter Strauch, 2009, Springer.
- ▶ Solved Problems in classical Mechanics, O.L. Delange and J. Pierrus, 2010, Oxford Press

### 3.5 DSE T5 - Nuclear and Particle Physics

Nuclear and Particle Physics	
	<b>6 Credits</b>
<b>General Properties of Nuclei</b>	
Constituents of nucleus and their Intrinsic properties, quantitative facts about mass, radii, charge density (matter density), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states.	
<b>Nuclear Models</b>	
Liquid drop model approach, semi empirical mass formula and significance of its various terms, condition of nuclear stability, two nucleon separation energies, Fermi gas model (degenerate fermion gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.	
<b>Radioactivity decay</b>	
(a) Alpha decay: basics of $\alpha$ -decay processes, theory of $\alpha$ - emission, Gamow factor, Geiger Nuttall law, $\alpha$ -decay spectroscopy. (b) $\beta$ -decay: energy kinematics for $\beta$ -decay, positron emission, electron capture, neutrino hypothesis. (c) Gamma decay: Gamma rays emission & kinematics, internal conversion.	
<b>Nuclear Reactions</b>	
Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct Reaction, resonance reaction, Coulomb scattering (Rutherford scattering).	
<b>Interaction of Nuclear Radiation with matter</b>	
Energy loss due to ionization (Bethe- Block formula), energy loss of electrons, Cerenkov radiation. Gamma ray interaction through matter, photoelectric effect, Compton scattering, pair production, neutron interaction with matter.	
<b>Detector for Nuclear Radiations</b>	
Gas detectors: estimation of electric field, mobility of particle, for ionization chamber and GM Counter.	

Basic principle of Scintillation Detectors and construction of photo-multiplier tube (PMT). Semiconductor Detectors (Si and Ge) for charge particle and photon detection (concept of charge carrier and mobility), neutron detector.

### Particle Accelerators

Accelerator facility available in India: Van-de Graaff generator (Tandem accelerator), Linear accelerator, Cyclotron, Synchrotrons.

### Particle physics

Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model, colour quantum number and gluons.

### Reference Books

- ▶ Introductory nuclear Physics by Kenneth S. Krane (Wiley India Pvt. Ltd., 2008).
- ▶ Concepts of nuclear physics by Bernard L. Cohen. (Tata Mcgraw Hill, 1998).
- ▶ Introduction to the physics of nuclei & particles, R.A. Dunlap. (Thomson Asia, 2004).
- ▶ Introduction to High Energy Physics, D.H. Perkins, Cambridge Univ. Press
- ▶ Introduction to Elementary Particles, D. Griffith, John Wiley & Sons
- ▶ Quarks and Leptons, F. Halzen and A.D. Martin, Wiley India, New Delhi
- ▶ Basic ideas and concepts in Nuclear Physics - An Introductory Approach by K. Heyde (IOP- Institute of Physics Publishing, 2004).
- ▶ Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000).
- ▶ Physics and Engineering of Radiation Detection, Syed Naeem Ahmed (Academic Press, Elsevier, 2007).
- ▶ Theoretical Nuclear Physics, J.M. Blatt & V.F. Weisskopf (Dover Pub.Inc., 1991)

## 3.6 DSE T6 - Astrophysics and Astronomy

### Astronomy and Astrophysics

**6 Credits**

### Astronomical Scales

Astronomical Distance, Mass and Time, Scales, Brightness, Radiant Flux and Luminosity, Measurement of Astronomical Quantities Astronomical Distances, Stellar Radii, Masses of Stars, Stellar Temperature. Basic concepts of positional astronomy: Celestial Sphere, Geometry of a Sphere, Spherical Triangle, Astronomical Coordinate Systems, Geographical Coordinate Systems, Horizon System, Equatorial

System, Diurnal Motion of the Stars, Conversion of Coordinates. Measurement of Time, Sidereal Time, Apparent Solar Time, Mean Solar Time, Equation of Time, Calendar. Basic Parameters of Stars: Determination of Distance by Parallax Method; Brightness, Radiant Flux and Luminosity, Apparent and Absolute magnitude scale, Distance Modulus; Determination of Temperature and Radius of a star; Determination of Masses from Binary orbits; Stellar Spectral Classification, Hertzsprung-Russell Diagram.

### **Astronomical techniques**

Basic Optical Definitions for Astronomy (Magnification Light Gathering Power, Resolving Power and Diffraction Limit, Atmospheric Windows), Optical Telescopes (Types of Reflecting Telescopes, Telescope Mountings, Space Telescopes, Detectors and Their Use with Telescopes (Types of Detectors, detection Limits with Telescopes)

### **Physical principles**

Gravitation in Astrophysics (Virial Theorem, Newton versus Einstein), Systems in Thermodynamic Equilibrium.

### **The sun and solar family**

The sun (Solar Parameters, Solar Photosphere, Solar Atmosphere, Chromosphere. Corona, Solar Activity, Basics of Solar Magneto-hydrodynamics. Helioseismology). The solar family (Solar System: Facts and Figures, Origin of the Solar System: The Nebular Model, Tidal Forces and Planetary Rings, Extra-Solar Planets.

Stellar spectra and classification Structure (Atomic Spectra Revisited, Stellar Spectra, Spectral Types and Their Temperature Dependence, Black Body Approximation, H R Diagram, Luminosity Classification)

### **The milky way**

Basic Structure and Properties of the Milky Way, Nature of Rotation of the Milky Way (Differential Rotation of the Galaxy and Oort Constant, Rotation Curve of the Galaxy and the Dark Matter, Nature of the Spiral Arms), Stars and Star Clusters of the Milky Way, Properties of and around the Galactic Nucleus.

### **Galaxies**

Galaxy Morphology, Hubble's Classification of Galaxies, Elliptical Galaxies (The Intrinsic Shapes of Elliptical, de Vaucouleurs Law, Stars and Gas). Spiral and Lenticular Galaxies (Bulges, Disks, Galactic Halo) The Milky Way Galaxy, Gas and Dust in the Galaxy, Spiral Arms

### **Large scale structure & expanding universe**

Cosmic Distance Ladder (An Example from Terrestrial Physics, Distance Measurement using Cepheid Variables), Hubble's Law (Distance- Velocity Relation), Clusters of Galaxies (Virial theorem and Dark

Matter).

### Reference Books

- ▶ Modern Astrophysics, B.W. Carroll & D.A. Ostlie, Addison-Wesley Publishing Co.
- ▶ Introductory Astronomy and Astrophysics, M. Zeilik and S.A. Gregory, 4<sup>th</sup> Edition, Saunders College Publishing.
- ▶ The physical universe: An introduction to astronomy, F. Shu, Mill Valley: University Science Books.
- ▶ Fundamental of Astronomy (Fourth Edition), H. Karttunen et al. Springer
- ▶ K.S. Krishnasamy, 'Astro Physics a modern perspective,' Reprint, New Age International (p) Ltd, New Delhi, 2002.
- ▶ Baidyanath Basu, 'An introduction to Astro physics', Second printing, Prentice -Hall of India Private limited, New Delhi, 2001.
- ▶ Textbook of Astronomy and Astrophysics with elements of cosmology, V.B. Bhatia, Narosa Publication

### 3.7 DSE T10 – Nano-materials and Applications

Nano Materials and Applications	
	<b>4 Credits</b>
<b>Nanoscale Systems</b>	
Length scales in physics, Nanostructures: 1D, 2D and 3D nanostructures (nanodots, thin films, nanowires, nanorods), Band structure and density of states of materials at nanoscale, Size Effects in nano systems, Quantum confinement: Applications of Schrodinger equation- Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D, 1D nanostructures and its consequences.	
<b>Synthesis of Nano structured Materials</b>	
Top down and Bottom up approach, Photolithography. Ball milling. Gas phase condensation. Vacuum deposition. Physical vapour deposition (PVD): Thermal evaporation, E-beam evaporation, Pulsed Laser deposition. Chemical vapour deposition (CVD). Sol-Gel. Electro deposition. Spray pyrolysis. Hydrothermal synthesis. Preparation through colloidal methods. MBE growth of quantum dots.	
<b>Characterization</b>	
X-Ray Diffraction. Optical Microscopy. Scanning Electron Microscopy. Transmission Electron Microscopy. Atomic Force Microscopy. Scanning Tunneling Microscopy.	
<b>Optical Properties</b>	
Coulomb interaction in nanostructures. Concept of dielectric constant for nanostructures and charging of nanostructure. Quasi-particles and excitons. Excitons in direct and indirect band gap semiconductor nanocrystals. Quantitative treatment of quasi-particles and excitons, charging effects. Radiative processes: General formalization-absorption, emission and luminescence. Optical properties of heterostructures and nanostructures.	
<b>Electron Transport</b>	
Carrier transport in nanostructures. Coulomb blockade effect, thermionic emission, tunneling and hopping conductivity. Defects and impurities: Deep level and surface defects.	
<b>Applications</b>	
Applications of nanoparticles, quantum dots, nanowires and thin films for photonic devices (LED, solar cells). Single electron transfer devices (no derivation). CNT based transistors. Nanomaterial Devices:	

Quantum dots heterostructure lasers, optical switching and optical data storage. Magnetic quantum well; magnetic dots -magnetic data storage. Micro Electromechanical Systems (MEMS), Nano Electromechanical Systems (NEMS).

### Reference Books

- ▶ C.P. Poole, Jr. Frank J. Owens, Introduction to Nanotechnology (Wiley India Pvt. Ltd.).
- ▶ S.K. Kulkarni, Nanotechnology: Principles & Practices (Capital Publishing Company)
- ▶ K.K. Chattopadhyay and A. N. Banerjee, Introduction to Nanoscience and Technology (PHI Learning Private Limited).
- ▶ Richard Booker, Earl Boysen, Nanotechnology (John Wiley and Sons).
- ▶ M. Hosokawa, K. Nogi, M. Naita, T. Yokoyama, Nanoparticle Technology Handbook (Elsevier, 2007).
- ▶ Introduction to Nanoelectronics, V.V. Mitin, V.A. Kochelap and M.A. Stroschio, 2011, Cambridge University Press.
- ▶ Bharat Bhushan, Springer Handbook of Nanotechnology (Springer-Verlag, Berlin, 2004).

### 3.8 DSE P10 - Nano Materials and Applications Lab

Nano Materials and Applications	
	<b>2 Credits</b>
<b>List of practical</b>	
<ol style="list-style-type: none"> <li>1. Synthesis of metal nano particles by chemical route.</li> <li>2. Synthesis of semiconductor nanoparticles.</li> <li>3. Surface Plasmon study of metal nanoparticles by UV-Visible spectrophotometer.</li> <li>4. XRD pattern of nanomaterials and estimation of particle size.</li> <li>5. To study the effect of size on color of nanomaterials.</li> <li>6. To prepare composite of CNTs with other materials.</li> <li>7. Growth of quantum dots by thermal evaporation.</li> <li>8. Prepare a disc of ceramic of a compound using ball milling, pressing and sintering, and study its XRD.</li> <li>9. Fabricate a thin film of nanoparticles by spin coating (or chemical route) and study transmittance spectra in UV-Visible region.</li> <li>10. Prepare a thin film capacitor and measure capacitance as a function of temperature or frequency.</li> <li>11. Fabricate a PN diode by diffusing Al over the surface of N-type Si and study its V-I characteristic.</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ C.P. Poole, Jr. Frank J. Owens, Introduction to Nanotechnology (Wiley India Pvt. Ltd.).</li> <li>▶ S.K. Kulkarni, Nanotechnology: Principles &amp; Practices (Capital Publishing Company).</li> <li>▶ K.K. Chattopadhyay and A.N. Banerjee, Introduction to Nanoscience &amp; Technology (PHI Learning Private Limited).</li> <li>▶ Richard Booker, Earl Boysen, Nanotechnology (John Wiley and Sons).</li> </ul>	

### 3.9 DSE T11 – Physics of Devices and Communication

Communication Electronics	
	<b>4 Credits</b>
<b>Electronic communication</b>	
Introduction to communication – means and modes. Need for modulation. Block diagram of an electronic communication system. Brief idea of frequency allocation for radio communication system in India (TRAI). Electromagnetic communication spectrum, band designations and usage. Channels and base-band signals. Concept of Noise, signal-to-noise (S/N) ratio.	
<b>Analogue Modulation</b>	
Amplitude Modulation, modulation index and frequency spectrum. Generation of AM (Emitter Modulation), Amplitude Demodulation (diode detector), Concept of Single side band generation and detection. Frequency Modulation (FM) and Phase Modulation (PM), modulation index and frequency spectrum, equivalence between FM and PM, Generation of FM using VCO, FM detector (slope detector), Qualitative idea of Super heterodyne receiver	
<b>Analogue Pulse Modulation</b>	
Channel capacity, Sampling theorem, Basic Principles- PAM, PWM, PPM, modulation and detection technique for PAM only, Multiplexing.	
<b>Digital Pulse Modulation</b>	
Need for digital transmission, Pulse Code Modulation, Digital Carrier Modulation Techniques, Sampling, Quantization and Encoding. Concept of Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK), Phase Shift Keying (PSK), and Binary Phase Shift Keying (BPSK).	
<b>Introduction to Communication and Navigation systems:</b>	
Satellite Communication– Introduction, need, Geosynchronous satellite orbits geostationary satellite advantages of geostationary satellites. Satellite visibility, transponders (C - Band), path loss, ground station, simplified block diagram of earth station. Uplink and downlink.	
Mobile Telephony System – Basic concept of mobile communication, frequency bands used in mobile communication, concept of cell sectoring and cell splitting, SIM number, IMEI number, need for data encryption, architecture (block diagram) of mobile communication network, idea of GSM, CDMA, TDMA	

and FDMA technologies, simplified block diagram of mobile phone handset, 2G, 3G and 4G concepts (qualitative only).

GPS navigation system (qualitative idea only)

### Reference Books

- ▶ Electronic Communication systems, G. Kennedy, 3rd Edn, 1999, Tata McGraw Hill.
- ▶ Principles of Electronic communication systems – Frenzel, 3rd edition, McGraw Hill
- ▶ Communication Systems, S. Haykin, 2006, Wiley India
- ▶ Electronic Communication system, Blake, Cengage, 5th edition.
- ▶ Wireless communications, Andrea Goldsmith, 2015, Cambridge University Press

### 3.10 DSE P11 – Physics of Devices and Communication Lab

Communication Electronics Lab	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To design an Amplitude Modulator using Transistor</li> <li>2. To study envelope detector for demodulation of AM signal</li> <li>3. To study FM - Generator and Detector circuit</li> <li>4. To study AM Transmitter and Receiver</li> <li>5. To study FM Transmitter and Receiver</li> <li>6. To study Time Division Multiplexing (TDM)</li> <li>7. To study Pulse Amplitude Modulation (PAM)</li> <li>8. To study Pulse Width Modulation (PWM)</li> <li>9. To study Pulse Position Modulation (PPM)</li> <li>10. To study ASK, PSK and FSK modulators</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Electronic Communication systems, G. Kennedy, 1999, Tata McGraw Hill.</li> <li>▶ Electronic Communication system, Blake, Cengage, 5th edition.</li> </ul>	

## 4 Skill Enhancement Course

## 4.1 SEC T1 - Computational Physics

Computational Physics	
	<b>2 Credits</b>
<b>Introduction</b>	
<p>Importance of computers in Physics, paradigm for solving physics problems for solution. Usage of linux as an Editor. Algorithms and Flowcharts: Algorithm: Definition, properties and development. Flowchart: Concept of flowchart, symbols, guidelines, types. Examples: Cartesian to Spherical Polar Coordinates, Roots of Quadratic Equation, Sum of two matrices, Sum and Product of a finite series, calculation of <math>\sin(x)</math> as a series, algorithm for plotting (1) lissajous figures and (2) trajectory of a projectile thrown at an angle with the horizontal.</p>	
<b>Scientific Programming</b>	
<p>Some fundamental Linux Commands (Internal and External commands). Development of FORTRAN, Basic elements of FORTRAN: Character Set, Constants and their types, Variables and their types, Keywords, Variable Declaration and concept of instruction and program. Operators: Arithmetic, Relational, Logical and Assignment Operators. Expressions: Arithmetic, Relational, Logical, Character and Assignment Expressions. Fortran Statements: I/O Statements (unformatted/formatted), Executable and Non-Executable Statements, Layout of Fortran Program, Format of writing Program and concept of coding, Initialization and Replacement Logic. Examples from physics problems.</p>	
<b>Control Statements</b>	
<p>Types of Logic (Sequential, Selection, Repetition), Branching Statements (Logical IF, Arithmetic IF, Block IF, Nested Block IF, SELECT CASE and ELSE IF Ladder statements), Looping Statements (DO-CONTINUE, DO-ENDDO, DO- WHILE, Implied and Nested DO Loops), Jumping Statements (Unconditional GOTO, Computed GOTO, Assigned GOTO) Subscripted Variables (Arrays: Types of Arrays, DIMENSION Statement, Reading and Writing Arrays), Functions and Subroutines (Arithmetic Statement Function, Function Subprogram and Subroutine), RETURN, CALL, COMMON and EQUIVALENCE Statements), Structure, Disk I/O Statements, open a file, writing in a file, reading from a file. Examples from physics problems.</p>	
<b>Programming</b>	
<ol style="list-style-type: none"> <li>1. Exercises on syntax on usage of FORTRAN</li> <li>2. Usage of GUI Windows, Linux Commands, familiarity with DOS commands and working in an</li> </ol>	

editor to write sources codes in FORTRAN.

3. To print out all natural even/ odd numbers between given limits.
4. To find maximum, minimum and range of a given set of numbers.
5. Calculating Euler number using  $\exp(x)$  series evaluated at  $x=1$

### Scientific word processing: Introduction to LaTeX

TeX/LaTeX word processor, preparing a basic LaTeX file, Document classes, Preparing an input file for LaTeX, Compiling LaTeX File, LaTeX tags for creating different environments, Defining LaTeX commands and environments, Changing the type style, Symbols from other languages. Equation representation: Formulae and equations, Figures and other floating bodies, Lining in columns- Tabbing and tabular environment, Generating table of contents, bibliography and citation, Making an index and glossary, List making environments, Fonts, Picture environment and colors, errors.

### Visualization

Introduction to graphical analysis and its limitations. Introduction to Gnuplot. importance of visualization of computational and computational data, basic Gnuplot commands: simple plots, plotting data from a file, saving and exporting, multiple data sets per file, physics with Gnuplot (equations, building functions, user defined variables and functions), Understanding data with Gnuplot

### Hands on exercises

1. To compile a frequency distribution and evaluate mean, standard deviation etc.
2. To evaluate sum of finite series and the area under a curve.
3. To find the product of two matrices
4. To find a set of prime numbers and Fibonacci series.
5. To write program to open a file and generate data for plotting using Gnuplot.
6. Plotting trajectory of a projectile projected horizontally.
7. Plotting trajectory of a projectile projected making an angle with the horizontally.
8. Creating an input Gnuplot file for plotting a data and saving the output for seeing on the screen. Saving it as an eps file and as a pdf file.
9. To find the roots of a quadratic equation.
10. Motion of a projectile using simulation and plot the output for visualization.
11. Numerical solution of equation of motion of simple harmonic oscillator and plot the outputs for visualization.
12. Motion of particle in a central force field and plot the output for visualization.

## 4.2 SEC T2 – Electrical Circuits and Networks

Electrical Circuits and Network Skills	
	<b>2 Credits</b>
<b>Basic Electricity Principles</b>	
Voltage, Current, Resistance, and Power. Ohm's law. Series, parallel, and series-parallel combinations. AC Electricity and DC Electricity. Familiarization with multimeter, voltmeter and ammeter.	
<b>Understanding Electrical Circuits</b>	
Main electric circuit elements and their combination. Rules to analyze DC sourced electrical circuits. Current and voltage drop across the DC circuit elements. Single-phase and three-phase alternating current sources. Rules to analyze AC sourced electrical circuits. Real, imaginary and complex power components of AC source. Power factor. Saving energy and money.	
<b>Electrical Drawing and Symbols</b>	
Drawing symbols. Blueprints. Reading Schematics. Ladder diagrams. Electrical Schematics. Power circuits. Control circuits. Reading of circuit schematics. Tracking the connections of elements and identify current flow and voltage drop.	
<b>Generators and Transformers</b>	
DC Power sources. AC/DC generators. Inductance, capacitance, and impedance. Operation of transformers.	
<b>Electric Motors</b>	
Single-phase, three-phase & DC motors. Basic design. Interfacing DC or AC sources to control heaters & motors. Speed & power of ac motor	
<b>Solid-State Devices</b>	
Resistors, inductors and capacitors. Diode and rectifiers. Components in Series or in shunt. Response of inductors and capacitors with DC or AC sources	
<b>Electrical Protection</b>	
Relays. Fuses and disconnect switches. Circuit breakers. Overload devices. Ground-fault protection. Grounding and isolating. Phase reversal. Surge protection. Interfacing DC or AC sources to control elements	

(relay protection device)

### **Electrical Wiring**

Different types of conductors and cables. Basics of wiring-Star and delta connection. Voltage drop and losses across cables and conductors. Instruments to measure current, voltage, power in DC and AC circuits. Insulation. Solid and stranded cable. Conduit. Cable trays. Splices: wrenuts, crimps, terminal blocks, split bolts, and solder. Preparation of extension board.

### **Reference Books**

- ▶ A text book in Electrical Technology - B L Theraja - S Chand & Co.
- ▶ A text book of Electrical Technology - A K Theraja
- ▶ Performance and design of AC machines - M G Say ELBS Edn.

### 4.3 SEC T<sub>3</sub> - Basic Instrumentation Skills

Basic of Measurement	
	<b>2 Credits</b>
<b>Basic of Measurement</b>	
<p>Instruments accuracy, precision, sensitivity, resolution range etc. Errors in measurements and loading effects. Multimeter: Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance.</p>	
<b>Electronic Voltmeter</b>	
<p>Advantage over conventional multimeter for voltage measurement with respect to input impedance and sensitivity. Principles of voltage, measurement (block diagram only). Specifications of an electronic Voltmeter/ Multimeter and their significance. AC millivoltmeter: Type of AC millivoltmeters: Amplifier-rectifier, and rectifier- amplifier. Block diagram ac millivoltmeter, specifications and their significance.</p>	
<b>Cathode Ray Oscilloscope</b>	
<p>Block diagram of basic CRO. Construction of CRT, Electron gun, electrostatic focusing and acceleration (Explanation only– no mathematical treatment), brief discussion on screen phosphor, visual persistence &amp; chemical composition. Time base operation, synchronization. Front panel controls. Specifications of a CRO and their significance.</p> <p>Use of CRO for the measurement of voltage (dc and ac frequency, time period. Special features of dual trace, introduction to digital oscilloscope, probes. Digital storage Oscilloscope: Block diagram and principle of working.</p>	
<b>Signal Generators and Analysis Instruments</b>	
<p>Block diagram, explanation and specifications of low frequency signal generators. Pulse generator, and function generator. Brief idea for testing, specifications. Distortion factor meter, wave analysis.</p>	
<b>Impedance Bridges &amp; Q-Meters</b>	
<p>Block diagram of bridge: working principles of basic (balancing type) RLC bridge. Specifications of RLC bridge. Block diagram &amp; working principles of a Q- Meter. Digital LCR bridges.</p>	
<b>Digital Instruments</b>	

Principle and working of digital meters. Comparison of analog & digital instruments. Characteristics of a digital meter. Working principles of digital voltmeter.

### **Digital Multimeter**

Block diagram and working of a digital multimeter. Working principle of time interval, frequency and period measurement using universal counter/ frequency counter, time- base stability, accuracy and resolution.

### **The test of lab skills will be of the following test items:**

1. Use of an oscilloscope.
2. CRO as a versatile measuring device.
3. Circuit tracing of Laboratory electronic equipment,
4. Use of Digital multimeter/VTVM for measuring voltages
5. Circuit tracing of Laboratory electronic equipment,
6. Winding a coil / transformer.
7. Study the layout of receiver circuit.
8. Trouble shooting a circuit
9. Balancing of bridges

### **Laboratory Exercises**

1. To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.
2. To observe the limitations of a multimeter for measuring high frequency voltage and currents.
3. To measure Q of a coil and its dependence on frequency, using a Q- meter.
4. Measurement of voltage, frequency, time period and phase angle using CRO.
5. Measurement of time period, frequency, average period using universal counter/ frequency counter.
6. Measurement of rise, fall and delay times using a CRO.
7. Measurement of distortion of a RF signal generator using distortion factor meter.
8. Measurement of R, L and C using a LCR bridge/ universal bridge.

### **Open Ended Experiments**

1. Using a Dual Trace Oscilloscope
2. Converting the range of a given measuring instrument (voltmeter, ammeter)

**Reference Books**

- ▶ A text book in Electrical Technology - B L Theraja - S Chand and Co.
- ▶ Performance and design of AC machines - M G Say ELBS Edn.

- ▶ Electronic Devices, 7/e Thomas L. Floyd, 2008, Pearson India

## 4.4 SEC T4 – Renewable Energy and Energy Harvesting

Renewable Energy and Energy Harvesting	
	<b>2 Credits</b>
<b>Fossil fuels and Alternate Sources of energy</b>	
Fossil fuels and nuclear energy, their limitation, need of renewable energy, non-conventional energy sources. An overview of developments in Offshore Wind Energy, Tidal Energy, Wave energy systems, Ocean Thermal Energy Conversion, solar energy, biomass, biochemical conversion, biogas generation, geothermal energy, tidal energy, Hydroelectricity.	
<b>Solar energy</b>	
Solar energy, its importance, storage of solar energy, solar pond, non-convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell, absorption air conditioning. Need and characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, and sun tracking systems.	
<b>Wind Energy harvesting</b>	
Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines, Power electronic interfaces, and grid interconnection topologies.	
<b>Ocean Energy</b>	
Ocean Energy Potential against Wind and Solar, Wave Characteristics and Statistics, Wave Energy Devices. Tide characteristics and Statistics, Tide Energy Technologies, Ocean Thermal Energy, Osmotic Power, Ocean Bio-mass.	
<b>Geothermal Energy</b>	
Geothermal Resources, Geothermal Technologies	
<b>Hydro Energy</b>	
Hydropower resources, hydropower technologies, environmental impact of hydro power sources.	
<b>Piezoelectric Energy harvesting</b>	
Introduction, Physics and characteristics of piezoelectric effect, materials and mathematical description of	

piezoelectricity, Piezoelectric parameters and modeling piezoelectric generators, Piezoelectric energy harvesting applications, Human power

### **Electromagnetic Energy Harvesting**

1. Linear generators, physics mathematical models, recent applications
2. Carbon captured technologies, cell, batteries, power consumption
3. Environmental issues and Renewable sources of energy, sustainability.

### **Demonstrations and Experiments**

1. Demonstration of Training modules on Solar energy, wind energy, etc.
2. Conversion of vibration to voltage using piezoelectric materials
3. Conversion of thermal energy into voltage using thermoelectric modules.

### **Reference Books**

- ▶ Non-conventional energy sources - G.D Rai - Khanna Publishers, New Delhi
- ▶ Solar energy - M P Agarwal - S Chand and Co. Ltd.
- ▶ Solar energy - Suhas P Sukhatave Tata McGraw - Hill Publishing Company Ltd.

## 4.5 SEC T5 – Weather Forecasting

Weather Forecasting	
	<b>2 Credits</b>
<b>Introduction to atmosphere</b>	
Elementary idea of atmosphere: physical structure and composition; compositional layering of the atmosphere; variation of pressure and temperature with height; air temperature; requirements to measure air temperature; temperature sensors: types; atmospheric pressure: its measurement; cyclones and anticyclones: its characteristics.	
<b>Measuring the weather</b>	
Wind; forces acting to produce wind; wind speed direction: units, its direction; measuring wind speed and direction; humidity, clouds and rainfall, radiation: absorption, emission and scattering in atmosphere; radiation laws	
<b>Weather systems</b>	
Global wind systems; air masses and fronts: classifications; jet streams; local thunderstorms; tropical cyclones: classification; tornadoes; hurricanes.	
<b>Climate and Climate Change</b>	
Climate: its classification; causes of climate change; global warming and its outcomes; air pollution; aerosols, ozone depletion, acid rain, environmental issues related to climate	
<b>Basics of weather forecasting</b>	

Weather forecasting: analysis and its historical background; need of measuring weather; types of weather forecasting; weather forecasting methods; criteria of choosing weather station; basics of choosing site and exposure; satellites observations in weather forecasting; weather maps; uncertainty and predictability; probability forecasts.

#### Demonstrations and Experiments

1. Study of synoptic charts & weather reports, working principle of weather station.
2. Processing and analysis of weather data
  - a. To calculate the sunniest time of the year.
  - b. To study the variation of rainfall amount and intensity by wind direction.
  - c. To observe the sunniest/driest day of the week.
  - d. To examine the maximum and minimum temperature throughout the year.
  - e. To evaluate the relative humidity of the day.
  - f. To examine the rainfall amount month wise.
3. Exercises in chart reading: Plotting of constant pressure charts, surfaces charts, upper wind charts and its analysis.
4. Formats and elements in different types of weather forecasts/ warning (both aviation and non-aviation)

#### Reference Books

- ▶ Aviation Meteorology, I.C. Joshi, 3rd edition 2014, Himalayan Books
- ▶ The weather Observers Hand book, Stephen Burt, 2012, Cambridge University Press.
- ▶ Meteorology, S.R. Ghadekar, 2001, Agromet Publishers, Nagpur.
- ▶ Text Book of Agrometeorology, S.R. Ghadekar, 2005, Agromet Publishers, Nagpur.
- ▶ Why the weather, Charls Franklin Brooks, 1924, Chpraman & Hall, London.
- ▶ Atmosphere and Ocean, John G. Harvey, 1995, The Artemis Press.

## 5 General Electives (for honours students of other disciplines)

### 5.1 GE T1 - Mechanics

Mechanics	
	<b>4 Credits</b>
<b>Vectors</b>	
Vector algebra. Scalar and vector products. Derivatives of a vector with respect to a parameter.	
<b>Ordinary Differential Equations</b>	
1st order homogeneous differential equations. 2nd order homogeneous differential equations with constant coefficients.	
<b>Laws of Motion</b>	
Frames of reference. Newton's Laws of motion. Dynamics of a system of particles. Centre of Mass.	
<b>Momentum and Energy</b>	
Conservation of momentum. Work and energy. Conservation of energy. Motion of rockets.	
<b>Rotational Motion</b>	
Angular velocity and angular momentum. Torque. Conservation of angular momentum.	
<b>Gravitation</b>	
Newton's Law of Gravitation. Motion of a particle in a central force field (motion is in a plane, angular momentum is conserved, areal velocity is constant). Kepler's Laws (statement only). Satellite in circular orbit and applications. Geosynchronous orbits. Basic idea of global positioning system (GPS). Weightlessness. Physiological effects on astronauts.	
<b>Oscillations</b>	
Simple harmonic motion. Differential equation of SHM and its solutions. Kinetic and Potential Energy, Total Energy and their time averages. Damped oscillations.	

### Elasticity

Hooke's law - Stress-strain diagram - Elastic moduli-Relation between elastic constants - Poisson's Ratio- Expression for Poisson's ratio in terms of elastic constants - Work done in stretching and work done in twisting a wire - Twisting couple on a cylinder - Determination of Rigidity modulus by static torsion – Torsional pendulum-Determination of Rigidity modulus and moment of inertia -  $q$ ,  $\eta$  and  $\square\square$  by Searles method.

### Special Theory of Relativity

Constancy of speed of light. Postulates of Special Theory of Relativity. Length contraction. Time dilation. Relativistic addition of velocities.

### Reference Books

- ▶ University Physics. F.W. Sears, M.W. Zemansky and H.D. Young, 13/e, 1986. Addison-Wesley

- ▶ Engineering Mechanics, Basudeb Bhattacharya, 2nd edn., 2015, Oxford University Press
- ▶ University Physics, Ronald Lane Reese, 2003, Thomson Brooks/Cole.

## 5.2 GE P1 – Mechanics Lab

Mechanics	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.</li> <li>2. To determine the Height of a Building using a Sextant.</li> <li>3. To determine the Moment of Inertia of a Flywheel.</li> <li>4. To determine the Young's Modulus of a Wire by Optical Lever Method.</li> <li>5. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.</li> <li>6. To determine the Elastic Constants of a Wire by Searle's method.</li> <li>7. To determine g by Bar Pendulum.</li> <li>8. To determine g by Kater's Pendulum.</li> <li>9. To study the Motion of a Spring and calculate (a) Spring Constant, (b) g.</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.</li> <li>▶ Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers.</li> <li>▶ Engineering Practical Physics, S.Panigrahi &amp; B.Mallick, 2015, Cengage Learning India Pvt. Ltd.</li> <li>▶ A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.</li> </ul>	

## 5.3 GE T2 - Electricity and Magnetism

Electricity and Magnetism	
	<b>4 Credits</b>
<b>Vector Analysis</b>	
Review of vector algebra (Scalar and Vector product), gradient, divergence, Curl and their significance, Vector Integration, Line, surface and volume integrals of Vector fields, Gauss-divergence theorem and Stoke's theorem of vectors (statement only).	
<b>Electrostatics</b>	
Electrostatic Field, electric flux, Gauss's theorem of electrostatics. Applications of Gauss theorem- Electric field due to point charge, infinite line of charge, uniformly charged spherical shell and solid sphere, plane charged sheet, charged conductor. Electric potential as line integral of electric field, potential due to a point charge, electric dipole, uniformly charged spherical shell and solid sphere. Calculation of electric field from potential. Capacitance of an isolated spherical conductor. Parallel plate, spherical and cylindrical condenser. Energy per unit volume in electrostatic field. Dielectric medium, Polarisation, Displacement vector. Gauss's theorem in dielectrics. Parallel plate capacitor completely filled with dielectric.	
<b>Magnetism</b>	
Magnetostatics: Biot-Savart's law and its applications- straight conductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law.  Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para-and ferro- magnetic materials.	
<b>Electromagnetic Induction</b>	
Faraday's laws of electromagnetic induction, Lenz's law, self and mutual inductance, L of single coil, M of two coils. Energy stored in magnetic field.	
<b>Maxwell's equations and Electromagnetic wave propagation</b>	
Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves, polarization.	
<b>Reference Books</b>	

- ▶ Electricity and Magnetism, Edward M. Purcell, 1986, McGraw-Hill Education
- ▶ Electricity & Magnetism, J.H. Fewkes & J.Yarwood. Vol. I, 1991, Oxford Univ. Press

## 5-4 GE P2 – Electricity and Magnetism Lab

### Electricity and Magnetism

**2 Credits**

#### List of Practical

1. To use a Multimeter for measuring
  - a. Resistances
  - b. AC and DC Voltages
  - c. DC Current
  - d. Checking electrical fuses.
2. Ballistic Galvanometer:
  - a. Measurement of charge and current sensitivity
  - b. Measurement of CDR
  - c. Determine a high resistance by Leakage Method
  - d. To determine Self Inductance of a Coil by Rayleigh's Method.
3. To compare capacitances using De'Sauty's bridge.
4. Measurement of field strength B and its variation in a Solenoid (Determine dB/dx)
5. To study the Characteristics of a Series RC Circuit.
6. To study a series LCR circuit LCR circuit and determine its
  - a. Resonant frequency
  - b. Quality factor
7. To study a parallel LCR circuit and determine its:
  - a. Anti-resonant frequency and
  - b. Quality factor Q
8. To determine a Low Resistance by Carey Foster's Bridge.
9. To verify the Thevenin and Norton theorems
10. To verify the Superposition, and Maximum Power Transfer Theorems

#### Reference Books

## 5.5 GE T<sub>3</sub> - Thermal Physics and Statistical Mechanics

Thermal Physics and Statistical Mechanics	
	<b>4 Credits</b>
<b>Laws of Thermodynamics</b>	
Thermodynamic Description of system: Zeroth Law of thermodynamics and temperature. First law and internal energy, conversion of heat into work, Various Thermodynamical Processes, Applications of First Law: General Relation between CP and CV, Work Done during Isothermal and Adiabatic Processes, Compressibility and Expansion Coefficient, Reversible and irreversible processes, Second law and Entropy, Carnot's cycle & theorem, Entropy changes in reversible & irreversible processes, Entropy-temperature diagrams, Third law of thermodynamics, Unattainability of absolute zero.	
<b>Thermo-dynamical Potentials</b>	
Enthalpy, Gibbs, Helmholtz and Internal Energy functions, Maxwell's relations and applications - Joule-Thompson Effect, Clausius- Clapeyron Equation, Expression for (CP – CV), CP/CV, TdS equations.	
<b>Kinetic Theory of Gases</b>	
Derivation of Maxwell's law of distribution of velocities and its experimental verification, Mean free path (Zeroth Order), Transport Phenomena: Viscosity, Conduction and Diffusion (for vertical case), Law of equipartition of energy (no derivation) and its applications to specific heat of gases; mono-atomic and diatomic gases.	
<b>Theory of Radiation</b>	
Blackbody radiation, Spectral distribution, Concept of Energy Density, Derivation of Planck's law, Deduction of Wien's distribution law, Rayleigh- Jeans Law, Stefan Boltzmann Law and Wien's displacement law from Planck's law.	
<b>Statistical Mechanics</b>	
Phase space, Macrostate and Microstate, Entropy and Thermodynamic probability, Maxwell-Boltzmann law - distribution of velocity - Quantum statistics - Fermi-Dirac distribution law - electron gas - Bose-Einstein distribution law - photon gas - comparison of three statistics.	
<b>Reference Books</b>	

- ▶ Thermal Physics, S. Garg, R. Bansal and C. Ghosh, 1993, Tata McGraw-Hill.
- ▶ A Treatise on Heat, Meghnad Saha, and B.N. Srivastava, 1969, Indian Press.

## 5.6 GE P<sub>3</sub> – Thermal Physics and Statistical Lab

Thermal Physics and Statistical	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.</li> <li>2. Measurement of Planck's constant using black body radiation.</li> <li>3. To determine Stefan's Constant.</li> <li>4. To determine the coefficient of thermal conductivity of Cu by Searle's Apparatus.</li> <li>5. To determine the Coefficient of Thermal Conductivity of Cu by Angstrom's Method.</li> <li>6. To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method.</li> <li>7. To determine the temperature co-efficient of resistance by Platinum resistance thermometer.</li> <li>8. To study the variation of thermo emf across two junctions of a thermocouple with temperature.</li> <li>9. To record and analyze the cooling temperature of an hot object as a function of time using a thermocouple and suitable data acquisition system</li> <li>10. To calibrate Resistance Temperature Device (RTD) using Null Method/Off- Balance Bridge</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B.L.Flint &amp; H.T.Worsnop, 1971, Asia Publishing House.</li> <li>▶ Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers</li> <li>▶ A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.</li> <li>▶ A Laboratory Manual of Physics for Undergraduate Classes, D.P. Khandelwal, 1985, Vani Publication.</li> </ul>	

## 5.7 GE T<sub>4</sub> - Waves and Optics

Waves and Optics	
	<b>4 Credits</b>
<b>Superposition of Two Collinear Harmonic oscillations</b>	
Linearity & Superposition Principle. (1) Oscillations having equal frequencies and (2) Oscillations having different frequencies (Beats).	
<b>Superposition of Two Perpendicular Harmonic Oscillations</b>	
Graphical and Analytical Methods. Lissajous Figures with equal and unequal frequency and their uses.	
<b>Waves Motion- General</b>	
Transverse waves on a string. Travelling and standing waves on a string. Normal Modes of a string. Group velocity, Phase velocity. Plane waves. Spherical waves, Wave intensity.	
<b>Sound</b>	
Simple harmonic motion - forced vibrations and resonance - Fourier's Theorem - Application to saw tooth wave and square wave - Intensity and loudness of sound - Decibels - Intensity levels - musical notes - musical scale. Acoustics of buildings: Reverberation and time of reverberation - Absorption coefficient - Sabine's formula - measurement of reverberation time - Acoustic aspects of halls and auditoria.	
<b>Wave Optics</b>	
Electromagnetic nature of light. Definition and Properties of wave front. Huygens Principle.	
<b>Interference</b>	
Interference: Division of amplitude and division of wavefront. Young's Double Slit experiment. Lloyd's Mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films. Fringes of equal inclination (Haidinger Fringes); Fringes of equal thickness (Fizeau Fringes). Newton's Rings: measurement of wavelength and refractive index.	

**Michelson's Interferometer**

Idea of form of fringes (no theory needed), Determination of wavelength, Wavelength difference, Refractive index, and Visibility of fringes.

**Diffraction**

Fraunhofer diffraction- Single slit; Double Slit. Multiple slits and Diffraction grating. Fresnel Diffraction: Half-period zones. Zone plate. Fresnel Diffraction pattern of a straight edge, a slit and a wire using half-period zone analysis.

**Polarization**

Transverse nature of light waves. Plane polarized light – production and analysis. Circular and elliptical polarization.

**Reference Books**

## 5.8 GE P<sub>4</sub> – Waves and Optics Lab

Waves and Optics	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To investigate the motion of coupled oscillators</li> <li>2. To determine the Frequency of an Electrically Maintained Tuning Fork by Melde's Experiment and to verify <math>\lambda^2 - T</math> Law.</li> <li>3. To study Lissajous Figures</li> <li>4. Familiarization with Schuster's focussing; determination of angle of prism.</li> <li>5. To determine the Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).</li> <li>6. To determine the Refractive Index of the Material of a Prism using Sodium Light.</li> <li>7. To determine Dispersive Power of the Material of a Prism using Mercury Light</li> <li>8. To determine the value of Cauchy Constants.</li> <li>9. To determine the Resolving Power of a Prism.</li> <li>10. To determine wavelength of sodium light using Fresnel Biprism.</li> <li>11. To determine wavelength of sodium light using Newton's Rings.</li> <li>12. To determine the wavelength of Laser light using Diffraction of Single Slit.</li> <li>13. To determine wavelength of (1) Sodium and (2) Spectral lines of the Mercury light using plane diffraction Grating</li> <li>14. To determine the Resolving Power of a Plane Diffraction Grating.</li> <li>15. To measure the intensity using photosensor and laser in diffraction patterns of single and double slits.</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.</li> <li>▶ Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers</li> <li>▶ A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.</li> </ul>	

## 5.9 GE T5 - Digital, Analogue Circuits and Instrumentation

Digital, Analog Circuits and Instrumentation	
	<b>4 Credits</b>
<b>Digital Circuits</b>	
<p>Difference between Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Binary to Decimal Conversion, AND, OR and NOT Gates (Realization using Diodes and Transistor). NAND and NOR Gates as Universal Gates. XOR and XNOR Gates.</p> <p>De Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Minterms and Maxterms. Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map</p> <p>Binary Addition. Binary Subtraction using 2's Complement Method). Half Adders and Full Adders and Subtractors, 4-bit binary Adder-Subtractor.</p>	
<b>Semiconductor Devices and Amplifiers</b>	
<p>Semiconductor Diodes: P and N type semiconductors. Barrier Formation in PN Junction Diode. Qualitative Idea of Current Flow Mechanism in Forward and Reverse Biased Diode. PN junction and its characteristics. Static and Dynamic Resistance. Principle and structure of (1) LEDs, (2) Photodiode, (3) Solar Cell</p> <p>Bipolar Junction transistors: n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Active, Cutoff &amp; Saturation regions Current gains <math>\alpha</math> and <math>\beta</math>. Relations between <math>\alpha</math> and <math>\beta</math>. Load Line analysis of Transistors. DC Load line &amp; Q- point. Voltage Divider Bias Circuit for CE Amplifier. H-parameter, Equivalent Circuit. Analysis of single-stage CE amplifier using hybrid Model. Input &amp; output Impedance. Current, Voltage and Power gains. Class A, B &amp; C Amplifiers.</p>	
<b>Operational Amplifiers (Black Box approach)</b>	
<p>Characteristics of an Ideal and Practical Op-Amp (IC 741), Open-loop and closed- loop Gain. CMRR, concept of Virtual ground. Applications of Op-Amps: (1) Inverting and non-inverting Amplifiers, (2) Adder, (3) Subtractor, (4) Differentiator, (5) Integrator, (6) Zero crossing detector.</p> <p>Sinusoidal Oscillators: Barkhausen's Criterion for Self-sustained Oscillations. Determination of Frequency of RC Oscillator</p>	
<b>Instrumentations</b>	
<p>Introduction to CRO: Block Diagram of CRO. Applications of CRO: (1) Study of Waveform, (2)</p>	

Measurement of Voltage, Current, Frequency, and Phase Difference.

Power Supply: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers Calculation of Ripple Factor and Rectification Efficiency, Basic idea about capacitor filter, Zener Diode and Voltage Regulation.

Timer IC: IC 555 Pin diagram and its application as Astable and Monostable Multivibrator.

## 5.10 GE P5 – Digital, Analogue Circuits and Instruments Lab

Digital, Analog Circuits and Instruments	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To measure (a) Voltage, and (b) Frequency of a periodic waveform using CRO</li> <li>2. To verify and design AND, OR, NOT and XOR gates using NAND gates.</li> <li>3. To minimize a given logic circuit.</li> <li>4. Half adder, Full adder and 4-bit Binary Adder.</li> <li>5. Adder-Subtractor using Full Adder I.C.</li> <li>6. To design an astable multivibrator of given specifications using 555 Timer.</li> <li>7. To design a monostable multivibrator of given specifications using 555 Timer.</li> <li>8. To study IV characteristics of PN diode, Zener and Light emitting diode</li> <li>9. To study the characteristics of a Transistor in CE configuration.</li> <li>10. To design a CE amplifier of given gain (mid-gain) using voltage divider bias.</li> <li>11. To design an inverting amplifier of given gain using Op-amp 741 and study its frequency response.</li> <li>12. To design a non-inverting amplifier of given gain using Op-amp 741 and study its Frequency Response.</li> <li>13. To study Differential Amplifier of given I/O specification using Op-amp.</li> <li>14. To investigate a differentiator made using op-amp.</li> <li>15. To design a Wien Bridge Oscillator using an op-amp.</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.</li> <li>▶ Electronics: Fundamentals and Applications, J.D. Ryder, 2004, Prentice Hall.</li> <li>▶ OP-Amps &amp; Linear Integrated Circuit, R.A. Gayakwad, 4th Edn, 2000, Prentice Hall.</li> <li>▶ Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.</li> </ul>	

## 5.11 GE T6 - Elements of Modern Physics

Elements of Modern Physics	
	<b>4 Credits</b>
<b>Planck's quantum</b>	
Planck's constant and light as a collection of photons; Photo- electric effect and Compton scattering. De Broglie wavelength and matter waves; Davisson-Germer experiment.	
<b>Problems with Rutherford model</b>	
Instability of atoms and observation of discrete atomic spectra; Bohr's quantization rule and atomic stability; calculation of energy levels for hydrogen like atoms and their spectra.	
<b>Position measurement</b>	
Gamma ray microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle- impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle.	
<b>Two slit interference experiment</b>	
Two slit interference experiment with photons, atoms & particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of wavefunction, probabilities and normalization; Probability and probability current densities in one dimension.	
<b>One Dimensional infinitely Rigid Box</b>	
Energy eigenvalues and eigenfunctions, normalization; Quantum dot as an example; Quantum mechanical scattering and tunnelling in one dimension - across a step potential and across a rectangular potential barrier.	
<b>Size and structure of atomic nucleus and its relation with atomic weight</b>	
Impossibility of an electron being in nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, semi-empirical mass formula and binding energy.	
<b>Radioactivity</b>	

Stability of nucleus; Law of radioactive decay; Mean life and half-life; decay; decay - energy released, spectrum and Pauli's prediction of neutrino;  $\gamma$ -ray emission.

### **Fission and fusion**

Mass deficit, relativity and generation of energy; Fission - nature of fragments and emission of neutrons. Nuclear reactor: slow neutrons interacting with Uranium 235; Fusion and thermonuclear reactions.

### **Reference Books**

## 5.12 GE P6 – Elements of Modern Physics Lab

Elements of Modern Physics	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. To determine value of Boltzmann constant using V-I characteristic of PN diode.</li> <li>2. To determine work function of material of filament of directly heated vacuum diode.</li> <li>3. To determine the ionization potential of mercury.</li> <li>4. To determine value of Planck's constant using LEDs of at least 4 different colours.</li> <li>5. To determine the wavelength of H-alpha emission line of Hydrogen atom.</li> <li>6. To determine the absorption lines in the rotational spectrum of Iodine vapour.</li> <li>7. To study the diffraction patterns of single and double slits using laser and measure its intensity variation using Photosensor &amp; compare with incoherent source – Na.</li> <li>8. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light</li> <li>9. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.</li> <li>10. To setup the Millikan oil drop apparatus and determine the charge of an electron.</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.</li> <li>▶ Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers</li> <li>▶ A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.</li> </ul>	

## 5.13 GE T7 – Solid State Physics

Solid State Physics	
	<b>4 Credits</b>
<b>Crystal Structure</b>	
Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis – Central and Non-Central Elements. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. Atomic and Geometrical Factor.	
<b>Elementary Lattice Dynamics</b>	
Lattice Vibrations and Phonons: Linear Monoatomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative Description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids. T3 law	
<b>Magnetic Properties of Matter</b>	
Dia-, Para-, Ferri- and Ferromagnetic Materials. Classical Langevin Theory of dia – and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss.	
<b>Dielectric Properties of Materials</b>	
Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. Cauchy and Sellmeier relations. Langevin-Debye equation. Complex Dielectric Constant. Optical Phenomena. Application: Plasma Oscillations, Plasma Frequency, Plasmons.	
<b>Elementary band theory</b>	
Kronig Penny model. Band Gaps. Conductors, Semiconductors and insulators. P and N type Semiconductors. Conductivity of Semiconductors, mobility, Hall Effect, Hall coefficient.	
<b>Superconductivity</b>	
Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth. Isotope effect.	
<b>Reference Books</b>

## 5.14 GE P7 – Solid State Physics Lab

Solid State Physics	
	<b>2 Credits</b>
<b>List of Practical</b>	
<ol style="list-style-type: none"> <li>1. Measurement of susceptibility of paramagnetic solution (Quinck's Tube Method)</li> <li>2. To measure the Magnetic susceptibility of Solids.</li> <li>3. To determine the Coupling Coefficient of a piezoelectric crystal.</li> <li>4. To measure the Dielectric Constant of a dielectric Materials with frequency</li> <li>5. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR)</li> <li>6. To determine the refractive index of a dielectric layer using SPR</li> <li>7. To study the PE Hysteresis loop of a Ferroelectric Crystal.</li> <li>8. To study the BH curve of iron using a Solenoid and determine the energy loss.</li> <li>9. To measure the resistivity of a semiconductor (Ge) crystal with temperature by four-probe method (room temperature to 150 oC) and to determine its band gap.</li> <li>10. To determine the Hall coefficient of a semiconductor sample.</li> </ol>	
<b>Reference Books</b>	
<ul style="list-style-type: none"> <li>▶ Advanced Practical Physics for students, B.L. Flint and H.T. ## 5.15 GE T<sub>8</sub> – Quantum Mechanics

Quantum Mechanics	
	<b>6 Credits</b>
<b>Time dependent Schrodinger equation</b>	
<p>Time dependent Schrodinger equation and dynamical evolution of a quantum state; Properties of Wave Function. Interpretation of Wave Function Probability and probability current densities in three dimensions; Conditions for Physical Acceptability of Wave Functions. Normalization. Linearity and Superposition Principles. Eigenvalues and Eigenfunctions. Position, momentum</p> <p>&amp; Energy operators; commutator of position and momentum operators; Expectation values of position and momentum. Wave Function of a Free Particle</p>	
<b>Time independent Schrodinger equation</b>	
<p>Hamiltonian, stationary states and energy eigenvalues; expansion of an arbitrary wavefunction as a linear combination of energy eigenfunctions; General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states; Application to the spread of Gaussian wavepacket for a free particle in one dimension; wave packets, Fourier transforms and momentum space wavefunction; Position-momentum uncertainty principle.</p>	
<b>General discussion of bound states in an arbitrary potential</b>	
<p>continuity of wave function, boundary condition and emergence of discrete energy levels; application to one-dimensional problem- square well potential; Quantum mechanics of simple harmonic oscillator-energy levels and energy eigenfunctions using Frobenius method.</p>	
Quantum theory of hydrogen-like atoms	
<p>Radial wave functions; Orbital angular momentum quantum numbers <math>l</math> and <math>m</math>; <math>s, p, d, \dots</math> shells (idea only) (qualitative idea only)</p>	
<b>Atoms in Electric and Magnetic Fields</b>	
<p>Electron Angular Momentum. Space Quantization. Electron Spin and Spin Angular Momentum. Larmor's Theorem. Spin Magnetic Moment. Stern-Gerlach Experiment. Zeeman Effect: Electron Magnetic Moment &amp; Magnetic Energy, Gyromagnetic Ratio &amp; Bohr Magneton.</p>	
<b>Atoms in External Magnetic Fields</b>	

Normal and Anomalous Zeeman Effect

### Many electron atoms

Pauli's Exclusion Principle. Symmetric and Antisymmetric Wave Functions. Periodic table. Fine structure. Spin orbit coupling. Spectral Notations for Atomic States. Total Angular Momentum. Vector Model. Spin-orbit coupling in atoms, L-S and J-J couplings.

### Reference Books

- ▶ A Text book of Quantum Mechanics, P.M. Mathews & K. Venkatesan, 2nd Ed., 2010, McGraw Hill
- ▶ Quantum Mechanics, Robert Eisberg and Robert Resnick, 2nd Edn., 2002, Wiley.
- ▶ Quantum Mechanics, Leonard I. Schiff, 3rd Edn. 2010, Tata McGraw Hill.
- ▶ Quantum Mechanics, G. Aruldas, 2nd Edn. 2002, PHI Learning of India.
- ▶ Quantum Mechanics, Bruce Cameron Reed, 2008, Jones and Bartlett Learning.
- ▶ Quantum Mechanics for Scientists and Engineers, D.A.B. Miller, 2008, Cambridge University Press

### Additional Books for Reference

- ▶ Quantum Mechanics, Eugen Merzbacher, 2004, John Wiley and Sons, Inc
- ▶ Introduction to Quantum Mechanics, David J. Griffith, 2nd Ed. 2005, Pearson Education
- ▶ Quantum Mechanics, Walter Greiner, 4th Edn., 2001, Springer

## 5.16 GE T9 - Nuclear and Particle Physics

Nuclear And Particle Physics	
	<b>6 Credits</b>
<b>General Properties of Nuclei</b>	
Constituents of nucleus and their Intrinsic properties, quantitative facts about mass, radii, charge density (matter density), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states.	
<b>Nuclear Models</b>	
Liquid drop model approach, semi empirical mass formula and significance of its various terms, condition of nuclear stability, two nucleon separation energies, Fermi gas model (degenerate fermion gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.	
<b>Radioactivity decay</b>	
(a) Alpha decay: basics of $\alpha$ -decay processes, theory of $\alpha$ - emission, Gamow factor, Geiger Nuttall law, $\alpha$ -decay spectroscopy. (b) $\beta$ -decay: energy kinematics for $\beta$ -decay, positron emission, electron capture, neutrino hypothesis. (c) Gamma decay: Gamma rays emission & kinematics, internal conversion.	
<b>Nuclear Reactions</b>	
Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Concept of compound and direct reaction, resonance reaction, Coulomb scattering(Rutherford scattering).	
<b>Interaction of Nuclear Radiation with matter</b>	
Energy loss due to ionization (Bethe- Block formula), energy loss of electrons, Cerenkov radiation. Gamma ray interaction through matter, photoelectric effect, Compton scattering, pair production, neutron interaction with matter.	
<b>Detector for Nuclear Radiations</b>	
Gas detectors: estimation of electric field, mobility of particle, for ionization chamber and GM Counter.	

Basic principle of Scintillation Detectors and construction of photo-multiplier tube (PMT). Semiconductor Detectors (Si and Ge) for charge particle and photon detection (concept of charge carrier and mobility), neutron detector.

### **Particle Accelerators**

Accelerator facility available in India: Van-de Graff generator (Tandem accelerator), Linear accelerator, Cyclotron, Synchrotrons.

### **Particle physics**

Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model, colour quantum number and gluons.

### **Reference Books**
